

IntroDrink.ch Publishes Collagen Reading Resource Covering Cofactor and Vegan Research for Swiss Readers

September 21, 2026

Zurich, Zurich - September 21, 2026 -

IntroDrink.ch, a Swiss information platform focused on natural dietary supplements, has expanded its educational library with two detailed articles that examine how collagen-related product labels are structured and what the wording on those labels can and cannot verify. The articles are written for readers in Switzerland who want to understand supplement terminology before making decisions.

The first article addresses the role of cofactors in collagen formation. It explains that cofactors are substances required by certain enzymes to convert collagen precursors into a stable fibre, while noting that the presence of a substance in a bodily process does not automatically mean that additional intake will produce an effect for any given individual. The introdrink.ch collagen cofactor guide also outlines how approved claims are tied to a specific nutrient and to conditions regarding quantity and portion size, and how those claims apply only once a product's composition and usage have been verified.

The second article focuses on vegan alternatives to collagen. Because collagen is a family of structural proteins found in animal tissue, traditional collagen products are not vegan. The introdrink.ch vegan collagen guide clarifies that the phrase "vegan collagen alternative" is not a uniform scientific category and can refer to a vegan composition, to included nutrients, to proteins, or to a marketing position. The article encourages readers to review the ingredients list, nutritional information, the specific wording of any claim, and the source of that claim before drawing conclusions.

Both articles were prepared in German and reflect a shared editorial approach centred on transparency. The material describes how nutrients such as Vitamin C are referenced in relation to normal collagen formation under regulated claim conditions, while making clear that such references do not indicate that a product contains collagen or that visible results will follow.

The timing of the resource reflects continued interest in beauty and skin-care supplements across the Swiss market, where questions about label language, hormone-related skin research, and ingredient sourcing have become more common. IntroDrink.ch positions the guides as reading material rather than as product recommendations, and each article carries a disclaimer stating that dietary supplements do not replace a balanced diet or medical advice.

The platform's content is created using AI-based tools and then reviewed by an editorial team that follows the EU Health Claims Regulation for health-related product information. The articles include links to related material on collagen in connective tissue, forms of collagen, and hormones and skin collagen, allowing readers to move between topics as needed.

IntroDrink.ch provides information on natural dietary supplements and operates as an affiliate of Nature Heart, disclosing that it receives a commission on qualified sales made through its links. The Nature Heart range includes immune system, fitness and energy, beauty and anti-aging, detox, sleep, and vitamin supplements, along with bundles and natural cosmetics. Products in the range are lab-tested and produced in Germany. Through its published articles, IntroDrink.ch aims to help readers interpret supplement labels with greater clarity and understanding.
