ELIS Manufacturing & Packaging Details Sports Nutrition Manufacturing Standards in GMP Certified Facility

September 23, 2026

KAUFMAN, TX - September 23, 2026 -

ELIS Manufacturing & Packaging Solutions, a Texas-based contract manufacturer serving the nutraceutical and performance supplement sectors, has outlined the quality protocols and turnkey capabilities that support its sports nutrition manufacturing operations. The company detailed how its GMP certified and FDA registered facility produces performance products for brands ranging from emerging startups to established lines.

The sports nutrition category has grown alongside rising consumer interest in fitness, recovery, and athletic performance, placing greater demands on the contract manufacturers that supply the market. ELIS Manufacturing produces a range of formats for the sector, including protein powders, pre-workout formulations, post-workout and recovery solutions, amino acid products, creatine, energy and endurance supplements, and sports hydration products.

According to the company, every product manufactured at its facility is subject to quality controls designed to meet the standards expected of supplements intended for athletes and fitness consumers. The company

operates within a GMP certified and FDA registered environment, and each batch undergoes comprehensive testing through an ISO 17025 certified third-party laboratory partner. That testing includes mandatory microbial and heavy metals analysis performed on every production lot regardless of size.

Beyond baseline safety testing, ELIS Manufacturing & Packaging Solutions conducts rotational analytics testing on label claim ingredients for all manufactured products. The company said this systematic verification is intended to confirm that supplements consistently deliver the nutritional profile and active ingredients stated on the label. For products where ELIS provides packaging services only, receiving pre-blended powders from another manufacturer, the company still conducts standard microbial testing with yeast and mold analysis on every incoming shipment.

For brands targeting competitive athletes, ELIS Manufacturing offers compatibility with the Informed Sport and Informed Choice certification programs. These third-party certification systems provide athletes with assurance that supplements have been tested for banned substances, a consideration for competitors subject to anti-doping regulations. The company said its manufacturing protocols are structured to accommodate these certification requirements.

"Athletes and everyday fitness consumers place a lot of trust in what goes into their supplements, and that trust has to be earned batch after batch," said Elizabeth Sanders, Chief Executive Officer of ELIS Manufacturing & Packaging Solutions. "We built our sports nutrition manufacturing around independent testing and full documentation because a label claim only means something if it can be verified. Our job is to give brands a partner they can stand behind."

The company positions its offering as a complete turnkey solution, handling each stage of production from formulation through fulfillment. Its formulation team works with brands to develop custom performance blends, integrate trending ingredients, and create flavor profiles suited to protein and sports supplement applications. ELIS Manufacturing said this integrated approach is designed to reduce the complexity of coordinating multiple vendors and to limit the risk of supply chain disruptions.

Packaging capabilities are structured around the needs of active consumers. The company produces protein tubs and gusseted pouches engineered to protect powder supplements from moisture and contamination, along with single-serve sachets and stick packs intended for pre-workout formulas, protein servings, and other products consumed at specific points in a training cycle. Precision filling equipment supports consistent dosing across these formats, while printing services allow for branding and nutritional information on packaging of varying sizes.

Production capacity is designed to scale with a brand's stage of growth. Minimum order quantities start at 20,000 units for sachets and stick packs and 2,000 units for bottled powders and capsules, a threshold the

company said makes it feasible for emerging brands to enter the sports nutrition market without prohibitive initial investment. For established lines, the facility supports higher-volume production runs.

ELIS Manufacturing & Packaging Solutions also offers value-added services including strategic ingredient sourcing, precision blending, custom printing, durable bottle printing, kitting, and climate-controlled warehousing for powders, liquids, and capsules. The company said these end-to-end capabilities are intended to support consistency across a product line as brands expand.

ELIS Manufacturing & Packaging Solutions is based in Kaufman, Texas, and provides contract manufacturing and packaging services across the nutraceutical, sports nutrition, beauty, food and beverage, and pet food industries. For more information, visit www.elismanufacturing.com.
