

AccuTemp Cooling and Heating Announces Fall HVAC Tune-up Program for Area Homeowners

October 22, 2026

Shreveport, Louisiana - October 22, 2026 -
As cooler weather approaches Northwest Louisiana, AccuTemp Cooling and Heating has announced the availability of its seasonal Fall HVAC Tune-up service for residential and commercial customers across the region. The initiative arrives ahead of the heating season, a period when local demand for reliable furnace and heat pump performance typically increases.

The company reports that autumn represents a practical time for homeowners to have heating systems inspected before sustained cold weather sets in. Preventive maintenance during the transition from cooling to heating can identify worn components, reduce the likelihood of mid-winter breakdowns, and support energy efficiency throughout the colder months. The service is available to households and businesses in Shreveport, Blanchard, Bossier City, Benton, Haughton, and Stonewall, as well as surrounding communities.

The seasonal program reflects AccuTemp's broader focus on heating repair and maintenance, one of several core services the contractor provides throughout the year. In addition to seasonal inspections, the company

offers air conditioning installation and repair, commercial HVAC repair and maintenance, advanced carbon monoxide detectors, and reliable home backup generators. The addition of carbon monoxide detection has become a notable consideration during the heating season, when fuel-burning appliances see heavier use and the risk of undetected gas buildup rises.

Duane Simpson, President of AccuTemp Cooling and Heating, noted that seasonal preparation plays a central role in system reliability. "Late Fall is the point in the year when heating equipment moves from months of inactivity into more frequent operation," Simpson said. "A thorough inspection at this stage allows technicians to catch small issues before they turn into larger failures during a cold snap."

Simpson added that safety remains a key element of the seasonal service. "When furnaces begin running again, it is an appropriate time to verify that combustion systems are operating correctly and that carbon monoxide detection is in place," he said. "The goal is to help households enter the winter with confidence in both comfort and safety."

According to the company, a standard tune-up includes examining system components, assessing operating efficiency, and identifying parts that may need attention before winter. Homeowners and businesses interested in scheduling seasonal maintenance can contact their team of experts today to arrange an appointment. The company also offers emergency service throughout the heating season by phone at (318) 861-2255.

AccuTemp Cooling and Heating has served the Shreveport area since 2004 and brings more than 40 years of combined HVAC experience to residential and commercial projects. The company works with materials from established industry manufacturers and emphasizes energy-efficient, long-lasting systems. Serving Shreveport, Bossier City, Haughton, Blanchard, Benton, Stonewall, and neighboring areas of Louisiana, the contractor provides installation, repair, and maintenance services performed by certified technicians. AccuTemp Cooling and Heating holds an A+ rating as a BBB Accredited Business and remains focused on setting a consistent standard within the heating, ventilation, and air conditioning industry.
