All Pro CS Decks Expands Pool Deck Design and Installation Services

November 16, 2026

COLLEGE STATION, TX - November 16, 2026 -
All Pro CS Decks, a deck construction firm based in College Station, Texas, has expanded its pool deck division to cover a broader range of surface materials, integrated shade structures and additional communities across the Brazos Valley. The expanded service applies both to decking built alongside new swimming pool installations and to replacement surfaces around existing pools.

The expansion brings five surface categories under a single scope of work. Those categories are brushed concrete, hand-seeded pea gravel finishes built with stones that generally measure between one-eighth and three-eighths of an inch, slip-resistant deck coatings, lime-coat surfaces blended from limestone and quartz, and composite decking systems. Each option is estimated and installed by the same crews that handle the firm's deck, porch and patio projects.

According to the company, the addition of composite and lime-coat surfaces responds to conditions specific to Central Texas, where summer heat and humidity place sustained stress on poolside materials. Lime-coat finishes are formulated to remain cooler underfoot than poured concrete or loose gravel, and composite boards are manufactured with textured surfaces intended to improve traction on wet decking. Surface

temperature and slip resistance were the two factors raised most often by property owners during consultations, the company reported.

Pool deck construction also carries requirements that differ from standard deck work, among them drainage slope directed away from the water line, expansion joints sized for slab movement, and transitions that meet finished pool coping without leaving a raised edge. The expanded scope treats those elements as design decisions made before construction rather than as adjustments made in the field. Site conditions including existing decking, irrigation lines and grade are documented before a written scope is issued.

"Expanding the pool deck category reflects how often clients ask for a surface that stays cooler and holds traction once the water starts moving," said Hector Garcia, owner of All Pro CS Decks. "The aim is a single contractor for the pool surround, the shade structure and the transition back to the house, rather than three separate trades working in sequence."

Under the expanded scope, pool decks can be engineered to carry pergolas, awnings and cabanas at the design stage instead of requiring those structures to be set later on separate footings. Garcia said the change shortens overall project timelines and reduces the need to cut into finished decking after installation. Shade structures are now drawn into the deck plan before an estimate is issued.

Installation timelines vary with size and design complexity, though composite pool decks are generally completed within one to two weeks, a schedule the firm reports is shorter than comparable poured concrete work that must cure and be sealed before use. Composite surfaces also remove the periodic resealing and staining associated with wood decking, requiring routine sweeping and rinsing instead. Maintenance requirements are reviewed with each property owner before materials are selected.

The expansion widens the geographic footprint of the service as well. Pool deck projects are now scheduled in Bryan, Brenham, Caldwell, Navasota and Steep Hollow in addition to College Station, with estimates provided at no charge following an on-site consultation. Estimates cover material samples, a written timeline and a fixed scope for the surface, footings and any attached shade structure. Scheduling for the coming season is already underway, the company said.

Garcia said demand has shifted toward surfaces that perform through full-day summer use rather than toward appearance alone. "Pool decks take more foot traffic than any other part of a backyard, and the material has to hold up to water, sunscreen and grit season after season," he said.

Material comparisons, finish options and project planning details for the expanded service are documented on the pool deck services page maintained by All Pro CS Decks. Property owners considering a surface replacement ahead of the next swimming season are being scheduled for consultations on a first-come basis.
