

Peptides Costa Rica Announces In-Country Stock of Research-Grade Peptides With Batch Documentation

September 21, 2026

Jacó, Puntarenas - September 21, 2026 -

Peptides Costa Rica has announced that it now maintains a domestic inventory of verified research-grade peptides, allowing the country's research community to source materials without relying on international shipments, customs delays, or suppliers offering limited documentation. The development addresses a longstanding logistical challenge for independent researchers, clinical teams, and laboratory staff who previously depended on cross-border orders.

By holding inventory within Costa Rica, the company reports that buyers can avoid customs holds and unexpected import charges that often accompany overseas purchases. Each batch is accompanied by an independent Certificate of Analysis, and pricing is displayed openly through the Peptides Costa Rica online catalog, which lists products both by compound and by research category.

The catalog spans a range of research compounds, including BPC-157, CJC-1295, GHK-Cu, Semaglutide, and related metabolic and GLP-1 compounds. Additional categories cover copper and dermatological

peptides, growth hormone secretagogues, tissue repair compounds, sleep-related neuropeptides, cardiovascular research compounds, bioregulator peptides, nootropic and neuropeptides, and mitochondrial compounds. The company states that all products are intended strictly for laboratory research use and are not approved to prevent, diagnose, treat, or cure any condition, nor are they suitable for human or veterinary use.

Joey Webster, owner of Peptides Costa Rica, said the shift toward domestic stock reflects the priorities researchers have raised most frequently.

"Researchers here have told us that reliability and documentation matter as much as the compounds themselves," said Webster. "Keeping inventory inside Costa Rica means orders arrive without customs uncertainty, and every batch carries its own Certificate of Analysis so the people using these materials know exactly what they are working with."

The company also maintains an information center covering peptide research topics, along with a volume savings program that applies graduated discounts for larger orders. Free shipping is offered on qualifying orders above a stated threshold, and payment options are confirmed during checkout. Orders are accepted online through PeptidesCostaRica.net, with service limited to customers located within the country.

Webster, who has a background in high-performance athletics and business, noted that the company's approach centers on clear communication throughout the ordering process.

"Direct contact for availability and order updates has been part of the model from the start," said Webster, owner of Peptides Costa Rica. "That transparency, paired with local delivery, is what sets the current operation apart from the international ordering that many researchers were accustomed to."

Products distributed by the company have been referenced in The Costa Rica News and The Tico Times. Access to the catalog requires customers to confirm they are at least 21 years of age and to agree to research-use terms before viewing product listings.

Peptides Costa Rica specializes in the distribution of research-grade peptide products for independent researchers, clinical teams, laboratory staff, and professional buyers within Costa Rica. The company emphasizes verified quality, transparent pricing, independent batch documentation, and reliable local delivery. Its product range is organized by compound and by research category, and its information center provides educational material on peptide science for those new to the field.
