Midwest Moving Company Opens Climate-Controlled Storage in Fargo

September 18, 2026

CHARLOTTE, NC - September 18, 2026 -
Midwest Moving Company has opened a climate-controlled storage facility in Fargo, expanding the options available to residential and commercial customers who need to hold goods for a period of weeks or months.

Climate control refers to a specific thing that is often described loosely in this industry. A climate-controlled unit holds temperature within a set range year round and manages humidity. It is not the same as a heated unit, which prevents freezing but does nothing about summer heat or moisture, and it is not the same as an indoor unit, which is simply enclosed. Customers comparing facilities should ask what range a unit actually maintains and whether humidity is controlled or only temperature, because the two terms are used interchangeably in advertising and are not interchangeable in practice.

The distinction matters more in this climate than in most. Temperatures in the Fargo area routinely run below zero in January and into the nineties in July. That range of roughly 120 degrees over the course of a year drives repeated expansion and contraction in stored materials. Solid wood furniture develops joint separation and finish cracking. Adhesives in laminate and veneer pieces fail. Leather dries and splits. Paper records and photographs become brittle. Vinyl records warp. Electronics accumulate condensation during rapid temperature swings, which is the mechanism behind most storage-related corrosion on circuit boards. Musical instruments, particularly anything with a wood body or tuning under tension, are among the most sensitive items customers store.

The company is direct that most household goods do not need it. Dishware, cookware, metal tools, plastic bins, outdoor furniture, and camping and sporting equipment hold up fine in a standard unit. Paying a premium to store a lawn mower in a climate-controlled space is not a good use of money, and customers asking about storage services in Fargo, ND are advised to split their inventory rather than assign everything to the higher tier by default.

Business use has been a meaningful share of early demand. Local contractors store materials that are sensitive to moisture. Medical and legal offices store archived records that have retention requirements and

cannot be allowed to degrade. Retailers hold seasonal inventory. Companies evaluating storage services in Fargo, ND for records should confirm whether their industry carries specific retention or handling obligations, since a general-purpose storage contract does not by itself satisfy a regulated records requirement.

The facility runs on energy-efficient HVAC and building systems. The company is not making a broad environmental claim about storage as a category, only noting that the equipment specified for the building was selected on efficiency ratings alongside capacity.

A few points worth knowing before booking any climate-controlled unit. Confirm whether the temperature range is maintained continuously or only during business hours, as some facilities set back overnight. Ask how the facility handles an extended power outage, which is a live consideration during winter storms here. Check how the unit is accessed, since a climate-controlled space reached through a loading dock and elevator involves a different retrieval process than a drive-up unit. And confirm how your insurance treats stored property, as coverage limits for off-premises contents are frequently lower than people assume.

Information on unit sizes, availability, and combined moving and storage arrangements is available through the Midwest Moving Company website. Read today to learn more.
