

## **Health Site Explains Why Parents Should Have A Thermometer Like Dr. Madre At Home**

*June 07, 2016*

June 07, 2016 - PRESSADVANTAGE -

The online portal of the National Institute of Health, MedlinePlus, published information regarding fever among babies and infants. Since fever among babies and infants is worrisome for parents, MedlinePlus emphasizes the importance of being informed. The initial step to properly address a fever is to check body temperature by using a medical infrared thermometer like Dr. Madre's.

As stated on MedlinePlus, fever is a relevant part of the immune defense against different types of infection. In fact, many older infants develop a high fever with even minor illnesses. Parents should schedule a check up with the doctor when their babies or infants have a fever of more than 100.4 ?.

Infants can eat food when they have a fever, but they should never be forced to eat. Like adults, sick children only tolerate bland, soft foods. Examples of bland foods include crackers, pasta, and bread. Sick infants should be encouraged to drink plenty of liquids.

In addition, parents should not bundle up a baby or infant with many layers of clothing or blankets, as this could prevent the fever from going down. One layer each of lightweight clothing and a blanket would be

enough. The room should also be comfortable, neither too hot or too cold. Most doctors prescribe acetaminophen or ibuprofen to help lower the fever in babies and infants. However, it is important that parents seek medical advice before administering medicine.

To accurately assess a fever, MedlinePlus recommended that parents have their own thermometers, like the Dr. Madre Non-contact Thermometer, at home. Dr. Madre is not just digital, it also uses infrared technology for a more accurate and quick reading. Since it has a non-contact feature, there is no need to press the thermometer against the skin of sick, irritable infants.

MedX Dispensing, Inc. is an authorized seller of Dr. Madre Infrared Thermometer and Dr. Madre Bedwetting Alarm, which are available on <http://www.amazon.com/Infrared-Thermometer-Non-Contact-Forehead-Pediatric/dp/B015W3OX2U>
