Wenger Remodeling Expands Remodeling Services With Integrated Design-Build Approach

September 22, 2026

GARNET VALLEY, PA - September 22, 2026 -
Wenger Remodeling has announced the expansion of its remodeling services to include a design-build approach, giving homeowners an integrated option for managing design and construction as part of the same project. The new service is intended to provide a more coordinated process for residential remodeling projects and address the growing interest in integrated project delivery.

The design-build model combines design and construction responsibilities within a single coordinated process. Rather than managing separate design and construction professionals, homeowners can work through one company throughout the project. This structure can help simplify communication, clarify project responsibilities, and create greater coordination between the planning and construction phases.

The addition of design-build services also provides a resource for homeowners researching design-build firms near me as they evaluate options for upcoming renovation projects. Wenger Remodeling will incorporate the approach into its existing remodeling services, providing a framework that connects project planning, design development, and construction.

According to the company, Wenger Remodeling has more than two decades of experience in the remodeling industry. The expanded service offering builds on that background while providing an additional project structure for homeowners considering renovations that require both design and construction work.

A design-build project generally brings the design and construction teams together earlier in the process. This can allow project considerations such as materials, construction requirements, budgets, and design objectives to be discussed within the same workflow. For homeowners, the arrangement may also reduce the need to coordinate independently between multiple parties.

David Wenger, founder of Wenger Remodeling, said the company?s move toward the design-build model reflects changing expectations around the remodeling process. The approach provides an opportunity to coordinate different stages of a project while maintaining a central point of communication.

The company also plans to publish an informational resource covering the design-build process and considerations homeowners may encounter when planning a renovation. The resource will address how integrated design and construction services work and what homeowners may want to consider when comparing different project delivery options.

The announcement comes as homeowners continue to evaluate ways to improve existing residential spaces rather than moving to new properties. Remodeling projects can range from targeted updates to larger renovations that require architectural planning, material selection, construction coordination, and other services. An integrated process can be particularly relevant for projects involving several stages of planning and construction.

For homeowners comparing design-build firms near me, understanding how each company structures its services can be an important part of the selection process. Factors such as project scope, communication procedures, design responsibilities, construction management, and budgeting can vary between remodeling providers.

Wenger Remodeling's expanded services are intended to give homeowners another option when planning projects that require both design and construction. The company will continue providing remodeling services while incorporating the design-build model into its broader range of residential renovation offerings.

Additional information about Wenger Remodeling and its design-build services is available through the company?s website. The site also provides information about the company?s remodeling work and the types of residential projects it handles.

The expansion represents an additional step in Wenger Remodeling?s ongoing development of its remodeling services. By combining design and construction within one project framework, the company is providing homeowners with another approach to organizing and managing residential renovation work. The design-build model also gives project teams an opportunity to coordinate planning, design decisions, and construction details throughout the remodeling process. Wenger Remodeling will continue incorporating this approach into its residential services as part of its expanded offerings.
