Schwartz?s Greenhouse Expands Seasonal Mum Flower Selection

September 23, 2026

ROMULUS, MI - September 23, 2026 -
Schwartz?s Greenhouse has announced an expanded selection of chrysanthemums, commonly known as mums, for the fall gardening season. The seasonal collection is intended to provide local gardeners and plant enthusiasts with additional options for fall displays, landscaping projects, and container gardens.

For more than three decades, Schwartz?s Greenhouse has served the local horticultural community with a variety of plants and gardening products. The expanded mum selection adds seasonal colour and variety to the greenhouse?s existing offerings while giving customers access to chrysanthemums in different colours, sizes, and growth habits.

Chrysanthemums are widely associated with the fall season and can be used in a range of residential gardening applications. Their availability in various colours and forms makes them suitable for containers, garden beds, entryways, and other outdoor spaces. The expanded selection at Schwartz?s Greenhouse is designed to accommodate different gardening preferences and seasonal planting needs.

The announcement also reflects continued interest in seasonal gardening and locally available plants. For residents searching for mum flowers near me, a local greenhouse can provide an opportunity to view available varieties in person and learn more about their basic growing requirements before making a selection.

Alongside the expanded chrysanthemum collection, Schwartz?s Greenhouse is introducing educational resources focused on seasonal plant care. The resources are intended to provide practical information for gardeners at different experience levels, with topics including variety selection, soil preparation, watering, pest management, and planting considerations.

Jim Schwartz, owner of Schwartz?s Greenhouse, said the expanded selection supports the greenhouse?s ongoing focus on horticultural education and seasonal gardening.

?Chrysanthemums are a popular part of the fall gardening season, and the expanded selection provides more variety for local gardeners. Educational resources can also help customers better understand how to care for their plants throughout the season.?

The greenhouse plans to offer workshops beginning in September, with sessions covering topics related to chrysanthemum care and broader autumn gardening practices. The workshops are expected to include information about selecting appropriate varieties, managing common garden pests, and incorporating seasonal plants into existing landscapes.

The educational program will complement a seasonal blog featuring gardening information and autumn planting topics. The resource is intended to provide general guidance on seasonal gardening and plant care while giving local residents access to information that can be referenced outside of the greenhouse?s regular business hours.

Schwartz?s Greenhouse also continues to incorporate sustainability considerations into its operations. Current practices include the use of water-efficient irrigation systems and sustainable packaging materials. These measures are part of the greenhouse?s broader approach to managing resources while serving local gardening customers.

The expanded chrysanthemum collection will be available during the fall season, subject to plant availability. Residents researching mum flowers near me can visit Schwartz?s Greenhouse to view the seasonal selection and learn more about available varieties and care requirements.

The seasonal workshops and online resources are expected to provide additional opportunities for community members to learn more about chrysanthemums, seasonal planting, and other fall gardening subjects. These educational offerings can help gardeners better understand how to select, plant, and care for mums throughout the autumn season while exploring practical ideas for maintaining attractive outdoor spaces. By combining seasonal plant offerings with accessible educational information, Schwartz?s Greenhouse is continuing its longstanding involvement in the local gardening community.

Additional information about the expanded mum selection, upcoming workshops, seasonal gardening resources, and available plant varieties can be found through Schwartz?s Greenhouse?s official website. Visitors can explore current offerings and learn more about upcoming opportunities to participate in seasonal gardening activities and educational programs.
