

Plumbing Supply And More Expands Multi-Warehouse Supply House Network for Contractors and Homeowners

September 24, 2026

Caln Township, Pennsylvania - September 24, 2026 -

Contractors and do-it-yourself homeowners regularly lose time and money to limited inventory at single-location supply stores, where a hard-to-find part can mean a delayed job, an extra trip across town, or a mismatched substitute pulled off a shelf under pressure. On days that span multiple job sites, a technician who cannot locate the correct valve, fitting, or connector often has no practical way to backtrack without stalling the work. That operational challenge is reshaping how professionals evaluate a supply house, placing inventory depth and shipping speed alongside price as the measures that matter most.

Plumbing Supply And More operates a resource built around that reality. The company maintains a 10-warehouse distribution network stocking more than 20,000 parts, with same-day shipping on orders placed before 1 PM from strategically located distribution centers. Priority Shipping through UPS 2nd Day Air and Next Day Air is available on eligible in-stock items, giving field crews a predictable timeline when a part must reach a site quickly.

As a plumbing supply and HVAC supply source, the company carries breadth across categories that typically

require separate vendors. Its catalog spans plumbing fixtures such as faucets, sinks, toilets and toilet parts, and disposals; pipe and fittings; valves; tank and tankless water heaters; hydronic heating and boiler parts; HVAC equipment with ducting and venting; and water treatment systems, including softeners and filtration addressing hard water, iron, and sediment. The company notes that water treatment needs vary significantly by region, a factor that influences which systems suit a given installation. The inventory also includes pumps, among them Myers well and sump models, and testing and inspection equipment such as pressure gauges, thermometers, gas leak detectors, and combustion analyzers.

That last category carries particular operational weight. Many jurisdictions require pressure testing of plumbing installations before the work is concealed behind drywall, so ready access to inspection equipment can determine whether a project stays on schedule at the commissioning stage.

"A stalled job costs a contractor far more in lost labor time than any single part is worth," said a spokesperson for Plumbing Supply And More. "The reason inventory depth and shipping speed matter is that a crew moving between sites in a single week depends on knowing a part will be there. Predictable availability protects the schedule in a way a discount alone cannot."

The company applies a wholesale pricing model available directly to both trade professionals and homeowners, without requiring a contractor account. Major equipment is sourced manufacturer-direct. A 30-day return policy applies, with refunds processed within 10 business days of a returned item's receipt.

"Serving licensed contractors and homeowners from the same catalog has been part of how this Plumbing Supply House has operated for decades," the spokesperson added. "The goal is a straightforward path to the right part, whether the order comes from a working crew or a single household project."

Plumbing Supply And More is a family-owned company with a 75-year history supplying professional-grade plumbing and HVAC products. Contractors and homeowners can browse the full catalog at plumbingsupplyandmore.com.
