Tuck & Howell Plumbing, Heating & Air Shares Comfort System Guidance for Owners of Established Greer Homes

September 29, 2026

GREER, SC - September 29, 2026 -
As older homes across the Upstate move through another season of temperature swings, Tuck & Howell Plumbing, Heating & Air is offering practical guidance to help local homeowners recognize the early signs of aging comfort systems before minor issues turn into major repairs. The family owned company, which has served the region since 1969, notes that many established Greer residences now operate with heating, cooling, and plumbing components that have quietly reached the end of their reliable service life.

Homes built decades ago often present a common set of concerns. Aging HVAC equipment tends to work harder to maintain steady temperatures, which can lead to uneven heating and cooling from room to room. Plumbing wear becomes more noticeable over time, and water heater concerns, slow or recurring drain issues, and declining ductwork performance frequently appear together as systems age. Reduced indoor air quality can also develop as filters, ducts, and ventilation components collect years of accumulated dust and debris.

According to the company, small problems are the ones most often overlooked. A minor drip, a faint temperature imbalance, or a slightly slower drain can seem harmless, yet each can signal a developing condition that grows more costly the longer it is ignored. Routine inspections and seasonal maintenance allow these early indicators to be identified and addressed while they remain manageable.

"Established homes in this area have a lot of life left in them, but the systems inside them need attention as the years add up," said Jay Mahaffey, general manager at Tuck & Howell Plumbing, Heating & Air. "When a homeowner notices a room that never quite gets comfortable or a water heater that struggles to keep up, that is usually the moment to look closer rather than wait."

The Upstate climate places particular demands on residential comfort systems, with humid summers and cold snaps that test both HVAC and plumbing components. Mahaffey noted that regular attention helps homeowners avoid emergency situations during the seasons when equipment is under the greatest strain.

"Reliability comes from staying ahead of wear," Mahaffey said. "A furnace that fails on the coldest night or an air conditioner that quits during a heatwave rarely does so without warning signs beforehand."

Homeowners seeking to protect the value and comfort of an older property are encouraged to schedule periodic evaluations of heating, cooling, and plumbing systems. The range of home comfort services by Tuck & Howell Plumbing, Heating & Air includes air conditioning and heat pump repair, furnace service, water heater repair and installation, drain cleaning, leak detection, fixture upgrades, repiping, ductwork evaluation, and indoor air quality improvements.

Tuck & Howell Plumbing, Heating & Air in Greer, SC is a family owned and operated business that has served homeowners and businesses throughout the region since 1969. The company combines long-standing local experience with modern, energy-efficient methods to address heating, cooling, and plumbing needs.
