

Willard Power Vac, Inc Expands Portland Dryer Vent Cleaning for Homes and Multi-Unit Properties

September 28, 2026

September 28, 2026 -

Willard Power Vac has expanded its dryer vent cleaning operations to serve full-route coverage across single-family residences and multi-unit properties throughout the Portland metropolitan region. The move addresses growing demand among property managers and homeowners seeking to reduce fire risks associated with clothes dryers.

Dryer-related fires remain a significant safety concern across the region, with clothes dryers accounting for roughly 3,000 house fires each year. Excess lint and debris that accumulate within vent systems can create hazardous conditions over time. As the company marks nearly half a century in operation, its expanded service structure allows technicians to complete cleanings for entire apartment complexes and residential communities on coordinated routes rather than single-unit visits.

The Portland area dryer vent cleaning service is designed to identify and remove buildup that restricts airflow, including situations where drying times lengthen, exteriors of dryers grow unusually warm, or lint becomes

visible around vent openings. Technicians clarify that the company does not repair dryers or diagnose electrical or gas problems, focusing instead on the thorough cleaning of vent systems.

"The decision to extend coverage across multi-unit properties reflects the scale of the fire-safety challenge in this region," said a spokesperson for Willard Power Vac. "When lint accumulates across dozens of units in a single building, the risk compounds. Coordinated route service allows property managers to address every unit systematically rather than piecemeal."

The expansion draws on decades of accumulated experience. Founded in 1975, the company has operated in the Pacific Northwest for more than 40 years, building one of the largest fleets of truck-mounted power vacuum systems in the area. That equipment investment supports the volume required for full-route work across larger properties.

"Half a century of experience shapes how technicians approach each system," the spokesperson added. "Knowing what a restricted vent looks like, and understanding the building configurations common to Portland housing stock, makes a measurable difference in the outcome for residents."

Beyond dryer vent work, the company provides air duct cleaning, chimney cleaning, and AC and furnace cleaning. Indoor air quality carries particular weight in the Pacific Northwest, where mold and mildew are common concerns. The air duct cleaning process connects a truck-mounted vacuum system to a building's ductwork, seals off exits to create a vacuum within the ducts, and uses specialized tools to dislodge and remove accumulated dust and debris.

The expanded route coverage from Willard Power Vac is available to properties across Portland, Salem, Gresham, Vancouver, Beaverton, The Dalles, and Hood River. Free over-the-phone estimates remain part of the company's standard practice.

Willard Power Vac, Inc. has served the Portland region since 1975, providing air duct cleaning, dryer vent cleaning, chimney cleaning, and AC and furnace cleaning. The company is NADCA certified and maintains one of the largest fleets of truck-mounted power vacuum systems in the area. Its work centers on indoor air quality and fire prevention for residential and commercial properties throughout the Pacific Northwest.
