

All-on-4 Dental Implants Bradford Appointments for Missing Teeth Added to Clinical Diary From 20th September 2026 at Taylored Dental Care

September 25, 2026

Bradford, England - September 25, 2026 -

Taylored Dental Care Bradford has added All-on-4 dental implant consultation appointments to the clinical diary from 20th September 2026, opening access to full-arch teeth replacement assessments for more patients across Bradford. The expanded availability is aimed at those living with the daily consequences of missing a complete arch of teeth, for whom finding a timely local implant consultation has not always been straightforward.

All-on-4 dental implants involve placing four titanium posts into the jawbone to support a full arch of replacement teeth. The approach has become a widely recognised treatment concept within implant dentistry for patients who have lost or are facing the loss of a full set of teeth. Where treatment is clinically successful and osseointegration ? the process by which the implant fuses with the surrounding bone ? is achieved, the resulting restoration is generally intended to remain stable during eating, speaking, and other daily activities, though individual outcomes vary depending on patient-specific factors and adherence to post-treatment care.

The four-implant approach is designed to maximise the use of available bone, though anatomical suitability varies between patients and can only be determined through individual clinical assessment. In some cases, adjunctive procedures may be required before implant placement can proceed. The treating clinician will outline any such requirements during the consultation, ensuring patients have the information they need before committing to treatment.

A longitudinal study titled "A Longitudinal Study of the Survival of All-on-4 Implants in the Mandible With Up to 10 Years of Follow-Up", published in the Journal of the American Dental Association in March 2011 (DOI: 10.14219/jada.archive.2011.0170) by Malo P, de Araújo Nobre M, Lopes A, Moss SM, and Molina GJ, reported cumulative implant-related success rates of 98.1% at five years and 94.8% at ten years across 245 patients, with an overall prosthesis survival rate of 99.2%. These findings are specific to the mandible and to the patient population studied and should not be generalised as expected outcomes for all patients or for treatments carried out at Taylored Dental Care Bradford.

Dr Carl Taylor, Principal Dentist at Taylored Dental Care Bradford, said the addition of more consultation slots reflects the practice's commitment to ensuring patients can access timely assessments. "People dealing with significant tooth loss often put off seeking advice because they assume the process will be complicated or inaccessible," he noted. "Having more appointments available means patients can get a proper assessment sooner and understand their options without unnecessary delay."

Not every patient presenting with tooth loss requires a full-arch solution. Taylored Dental Care Bradford also offers consultations for single tooth dental implants, addressing situations where one tooth is missing, and for patients with multiple missing teeth where a partial solution may be more appropriate than full-arch replacement. Each case is assessed individually, with the treating clinician recommending the most clinically appropriate pathway based on the extent of tooth loss, bone condition, and the patient's overall oral health.

The broader range of dental implant treatments at Taylored Dental Care Bradford is available at: <https://tayloreddentalcare.co.uk/bradford/dental-implants/>.

Consultations begin with a thorough examination of the teeth, gums, and jaw, with scans and imaging taken where clinically indicated. The implant dentist discusses clinical considerations relevant to each patient's situation, covering treatment options, timelines, and what each stage of the process involves. No treatment proceeds without a clear explanation of what is being recommended and why.

Taylorred Dental Care Bradford welcomes nervous patients. The team adapts the pace of appointments for patients who experience anxiety around dental visits, taking additional time to explain procedures and address concerns before any treatment begins. Dental anxiety is a recognised barrier to seeking care, and the practice acknowledges that feeling informed and comfortable plays a significant role in how patients experience treatment.

Practice information, including details about the dental team of Taylorred Dental Care Bradford, can be found at: <https://tayloreddentalcare.co.uk/bradford/>.

Taylorred Dental Care Bradford can be contacted directly to arrange a consultation or to ask questions ahead of an appointment.
