

822 Heat and Air Expands Commercial HVAC Contractor Services Across DFW Metroplex

October 13, 2026

Benbrook, TX - October 13, 2026 -

822 Heat and Air has expanded its commercial and residential HVAC installation and repair services throughout the Greater Dallas-Fort Worth Metroplex in response to rising demand for reliable climate control across the region. The expansion enables the company to serve both large-scale commercial facilities and residential properties with complete installation, replacement, repair, and ongoing maintenance.

The expanded offering comes as commercial property owners across North Texas face increasing pressure to maintain comfortable, energy-efficient indoor environments while managing operational costs. As one of the Irving commercial HVAC contractors active in the area, the company reports growing interest in systems designed to distribute air efficiently, improve indoor air quality, and lower energy consumption.

The company provides a broad range of commercial services, including installation of central air systems, rooftop units, split systems, ventilation solutions, ductwork design, heat pump systems, chiller systems, and building automation systems. These services are supported by a team of certified technicians who handle

each project from initial consultation through post-installation maintenance.

"The expansion allows the team to respond to the growing need for dependable climate control across commercial and residential properties in the region," said David, a representative of 822 Heat and Air. "Demand has continued to rise across the Metroplex, and the broader service capacity means more facilities can access timely installation and repair."

The company, based in Irving Texas, emphasizes energy-saving solutions that support both cost reduction and environmental responsibility. According to the company, properly specified and maintained systems help commercial operators reduce utility expenses while contributing to lower overall energy use. The expanded maintenance programs are intended to help businesses avoid unexpected downtime by keeping equipment operating at designed efficiency.

"Commercial facilities depend on consistent heating and cooling to protect occupants, equipment, and daily operations," David added. "The focus remains on precise installation and ongoing service so that systems perform reliably over their full lifespan."

The service expansion covers Crowley, Burleson, Benbrook, Granbury, Joshua, Godley, Cleburne, Alvarado, Fort Worth, Arlington, Dallas, and surrounding communities throughout the Greater DFW Metroplex. The company notes that the broadened coverage area reflects the pace of commercial development across the region and the need for contractors capable of handling projects of varying scale.

In addition to commercial work, 822 Heat and Air continues to provide residential HVAC installation, repair, ductwork services, and seasonal AC tune-up service. Financing options are available subject to credit approval and offer eligibility.

822 Heat and Air is a heating and air conditioning contractor serving commercial and residential clients across North Texas. The company specializes in complete HVAC installation for large-scale commercial and residential customers and offers replacement, repair, and ongoing maintenance through a team of certified technicians. Operating under license number TACLA65080C, the company serves the Greater DFW Metroplex and surrounding suburbs with a focus on reliable, efficient, and sustainable systems.
