

Lee Neon Signs Introduces New Monument Sign Technology for Nashville Businesses

October 07, 2026

ADAIRVILLE, KY - October 07, 2026 -

Lee Neon Signs, a full-service commercial sign company serving Nashville, Tennessee, has announced the introduction of new monument sign technology designed to provide businesses and commercial property owners with additional options for exterior identification and digital communication. The expanded offerings combine traditional architectural monument signage with modern LED displays, programmable messaging systems, and updated illumination technology.

The announcement represents an expansion of the company's monument sign capabilities, providing additional customization options for businesses developing new commercial properties or modernizing existing signage. The updated technology allows property owners to incorporate electronic messaging into permanent architectural signs while maintaining a design that complements their buildings and surrounding environments.

Lee Neon Signs is making the expanded monument signage options available to retail centers, healthcare facilities, corporate offices, educational institutions, residential developments, and other commercial properties throughout Nashville and Middle Tennessee. A central component of the expanded offerings is the

integration of programmable LED message centers into custom monument sign designs.

These electronic displays allow businesses to update promotional messages, announce upcoming events, communicate operating hours, and display other information without replacing permanent sign components. The new configurations can combine traditional monument sign elements, including dimensional lettering and architectural finishes, with full-color digital displays and modern LED illumination.

Businesses can select configurations based on their property requirements, branding preferences, viewing distances, and applicable local signage regulations. The updated illumination options also provide additional flexibility for properties requiring exterior identification during evening hours.

Alongside the introduction of updated display technology, Lee Neon Signs continues to offer custom monument sign design and fabrication using architectural materials suited to commercial properties. Available design options include aluminum structures, masonry elements, stone finishes, dimensional lettering, and illuminated identification panels.

For shopping centers and multi-tenant developments, monument signs can incorporate interchangeable tenant panels alongside electronic message centers. These configurations allow property managers to accommodate changes in occupancy while maintaining a consistent exterior appearance. Traditional monument signs without digital displays remain available for businesses seeking permanent identification with architectural finishes and optional illumination.

The expanded offerings allow customers to select monument signage based on communication needs, property characteristics, and long-term maintenance considerations. The introduction of new monument sign technology is intended to support businesses opening new locations, renovating existing properties, and replacing aging exterior signage.

Retail developments can use programmable displays to communicate changing promotional information, while healthcare facilities and educational institutions can incorporate electronic messaging into their primary entrance signs. Lee Neon Signs coordinates monument sign projects through initial consultation, custom design, fabrication, permitting assistance, and professional installation.

The company's project planning process considers available signage space, electrical requirements, architectural compatibility, visibility, and applicable zoning restrictions. For projects involving electronic displays, additional considerations include display resolution, illumination levels, viewing angles, and ongoing maintenance requirements.

The expanded monument signage offerings are available to businesses and property owners throughout

Nashville, Franklin, Brentwood, Hendersonville, Murfreesboro, and surrounding Middle Tennessee communities. Lee Neon Signs also provides sign installation, maintenance, and repair services for commercial signage projects.

Lee Neon Signs is a family-owned commercial sign company with a history in the signage industry dating back to 1948. Serving Nashville, Middle Tennessee, and Kentucky, the company provides custom monument signs, illuminated channel letters, electronic message centers, building signs, cabinet signs, and other commercial signage solutions. Its services include custom sign design, manufacturing, installation, maintenance, and repair for businesses, property developers, and other commercial organizations.
