

822 Heat and Air Expands HVAC Duct Installation and Repair Services Across DFW

October 22, 2026

Benbrook, TX - October 22, 2026 -
822 Heat and Air has expanded its commercial and residential ductwork services to meet growing demand for improved air distribution throughout the Greater DFW Metroplex. The expansion covers duct inspection, repair, sealing, replacement, and design for both large-scale commercial buildings and residential homes.

The company, which operates as a licensed heating and air conditioning contractor, has broadened its focus on ductwork as a central component of overall system performance. Even a high-efficiency furnace or air conditioner can perform poorly when ducts are leaking, damaged, or poorly designed. Addressing these issues directly, the expanded service line targets common problems such as leaky or disconnected ducts, uneven heating and cooling between rooms, elevated energy bills, excess dust, and deteriorating duct systems.

The move reflects a broader industry trend in which property owners seek solutions beyond equipment replacement alone. Properly sized and code-compliant hvac duct installation plays a significant role in energy

efficiency and indoor comfort, and the company reports increased requests for ductwork evaluations from both commercial and residential clients across its service area.

"Ductwork is often overlooked when homeowners and business owners think about comfort and energy use," said David, a representative of 822 Heat and Air. "A system can only operate as well as the ducts that carry the air. By expanding these services, the goal is to help clients get the full value from the equipment they already own, while addressing problems that are frequently invisible until energy bills rise or certain rooms become difficult to heat and cool."

The expanded services include ductwork inspection and diagnostics, duct repair, duct sealing, duct replacement, and complete duct design for new and existing structures. Technicians evaluate each system before recommending a course of action, with repair considered before full replacement whenever a system can be restored effectively.

"Thorough inspection comes first," David added. "Clients receive straightforward explanations and upfront information, and there is no push to replace ductwork that can be repaired. Code-compliant design and proper sizing remain the priority for every project, whether it involves a single home or a large commercial facility."

Signs that a ductwork system may require attention include rooms that are hard to heat or cool, high energy bills, excessive dust, noisy ducts, visible damage, and a system that runs constantly while leaving the space uncomfortable. The company notes that these indicators often point to issues that can be resolved without replacing core heating or cooling equipment.

822 Heat and Air provides commercial and residential HVAC services throughout the Greater DFW Metroplex and surrounding suburbs, including Crowley, Burleson, Benbrook, Granbury, Joshua, Godley, Cleburne, Alvarado, Fort Worth, Arlington, and Dallas. Service offerings include Commercial HVAC, Residential HVAC, Ductwork, and AC Tune-Up Service. The company employs experienced technicians and emphasizes properly sized, code-compliant systems designed for long-term efficiency and comfort. Financing is available subject to credit approval and offer eligibility, with terms arranged directly between the customer and the chosen finance company. The company operates under license number TACLA65080C.
