

Tennessee Sign Company Launches New Business Sign Program

October 09, 2026

Chattanooga, Tennessee - October 09, 2026 -

Tennessee Sign Company is introducing a new Business Sign Launch Program designed to simplify the process of obtaining custom commercial signage for businesses opening new locations, renovating existing properties, and implementing corporate rebranding initiatives throughout Chattanooga and Southeast Tennessee.

The new program brings together custom sign design, project planning, permitting assistance, fabrication, and installation through a coordinated process. It is intended to address common challenges businesses encounter when managing multiple signage requirements alongside construction schedules, property improvements, and opening deadlines.

The initiative introduces a structured approach to commercial signage projects, allowing customers to coordinate temporary opening signs, permanent building identification, monument signs, and interior branding through a single project plan. The Business Sign Launch Program is designed for retailers, restaurants, healthcare providers, professional offices, and commercial developers preparing to open or renovate business locations.

Under the new program, customers can coordinate several types of business signage during the initial planning stages rather than ordering individual signs at different points in the development process. Available signage options include illuminated channel letters, dimensional building signs, monument signs, cabinet signs, storefront graphics, window lettering, and interior identification displays.

The program also incorporates temporary signage for businesses that need to announce upcoming openings while their permanent exterior signs are being fabricated or installed. By planning temporary and permanent signage together, businesses can establish consistent branding throughout the transition from construction to opening.

A significant component of the new initiative is its focus on businesses managing signage across multiple commercial properties. Companies expanding into additional markets or updating their corporate identities frequently require signage that maintains consistent branding while accommodating different building dimensions, mounting conditions, and municipal regulations.

Tennessee Sign Company's new program provides a coordinated approach to these projects, allowing businesses to establish approved design specifications that can be adapted to individual properties. For multi-location projects, the company can develop installation schedules based on each property's requirements, construction progress, and applicable permitting procedures. The coordinated process is intended to reduce administrative work for business owners and property managers who would otherwise need to manage separate signage projects at each location.

The new program also emphasizes earlier coordination between signage planning and commercial construction schedules. Building signs often require electrical connections, structural mounting provisions, municipal permits, and landlord approval. Addressing these requirements after construction is underway can create additional installation challenges.

Tennessee Sign Company's updated approach incorporates site evaluations, design development, and permitting considerations into the initial stages of signage planning. For businesses undergoing renovations, the program can also address the removal of existing signage and the installation of updated exterior identification. This approach helps customers establish realistic project schedules while accounting for the requirements associated with different sign types.

The Business Sign Launch Program will serve businesses throughout Chattanooga and surrounding Southeast Tennessee communities, including Cleveland, Ooltewah, Hixson, Signal Mountain, and Lookout Mountain. The initiative is intended to support individual business owners, franchise operators, property managers, and commercial developers seeking a coordinated approach to exterior and interior signage.

Tennessee Sign Company is a full-service commercial sign company serving Chattanooga and the surrounding Southeast Tennessee region. The company specializes in custom business signs, illuminated channel letters, monument signs, pylon signs, building signage, and interior identification systems. Its services include sign design, fabrication, permitting assistance, installation, and maintenance for businesses and commercial property owners throughout Tennessee.
