STM Trucks & Machinery Repairs Machinery at Customer Worksites

September 29, 2026

September 29, 2026 -
STM Trucks & Machinery provides mobile machinery repair services across Sydney and surrounding NSW regions, dispatching equipped service vehicles staffed by qualified technicians to perform maintenance and repairs directly at customer worksites. The service addresses equipment downtime by eliminating the need to transport machinery to workshop facilities.

Traditional machinery repairs require moving equipment to a workshop facility, creating transport costs and removing the machine from the worksite for the duration of delivery, repair, and collection. The service responds to demand from contractors and tradespeople who cannot afford extended equipment downtime during critical project phases. On-site repairs eliminate transport movements by allowing repairs to occur without removing equipment from the worksite.

Mobile technicians perform diagnostics, mechanical appraisals, and undercarriage work, including track chain replacement, roller maintenance, sprocket repairs, idler adjustments, and track tension modifications. The service covers excavators, skid steers, and track loaders, with undercarriage repairs being the most complex work, typically completed in the field rather than in a workshop. These repairs often require specialised tools and expertise that the mobile units carry directly to job sites.

The mobile service vehicles carry diagnostic equipment, hydraulic testing tools, and a range of commonly required replacement parts. Mobile units also stock hydraulic fluids, filters, and consumable items needed for routine maintenance tasks.

"Float costs alone add up quickly, and losing two days for what might be a half-day repair creates significant project delays," said a spokesperson for STM Trucks & Machinery. "Our mobile units handle repairs that most operators assume require workshop facilities, particularly undercarriage work that keeps machines productive on-site."

The mobile repair service operates throughout metropolitan Sydney, the Southern Highlands, and Wollongong regions under a flat-rate travel charge that applies regardless of distance within the coverage area.

Emergency repair support operates around the clock, with mobile units backed by workshop facilities at the company's three NSW locations. STM Trucks & Machinery maintains service centres in Smeaton Grange, Queanbeyan West, and Unanderra, providing parts inventory and technical support for field operations when complex repairs require additional resources.

The mobile service complements STM Trucks & Machinery's existing workshop capabilities, which accommodate large vehicles including B-Doubles and operate six days per week. Workshop facilities remain essential for major rebuilds, engine overhauls, and repairs that require heavy-lifting equipment. Courtesy vehicles and customer amenities support clients during extended repair periods at workshop locations.

STM Trucks & Machinery stocks genuine and aftermarket machinery parts in NSW for multiple brands, including Kobelco and ASV equipment, and delivers parts daily to support both mobile and workshop repair operations. The company's parts inventory includes components for hydraulic systems, engines, and undercarriage assemblies commonly required for field repairs. Parts sourcing capabilities extend beyond stocked inventory to include next-day ordering for specialised components.

Mobile repair scheduling accommodates urgent breakdowns and planned maintenance windows, with technicians equipped to perform fluid changes, filter replacements, and component installations without requiring specialised lifting equipment typically found in workshop environments. Preventive maintenance programs can be coordinated with project schedules to minimise operational disruption during equipment servicing.

The mobile service operates alongside STM Trucks & Machinery's 24-hour emergency support. Mobile technicians receive ongoing training on new equipment models and repair techniques to maintain technical competency across multiple machinery brands. This training ensures consistent service quality whether repairs occur at customer sites or workshop facilities.

About STM Trucks & Machinery

STM Trucks & Machinery is a family-owned business with about 50 years of experience serving NSW's truck and machinery industry. The company operates from three locations in Smeaton Grange, Queanbeyan

West, and Unanderra, providing sales, service, and parts support for leading brands including Iveco, Fuso, Kobelco, Merlo, and ASV. The company specialises in serving small business owners, landscapers, and tradespeople. The company maintains a parts inventory and offers in-house financing solutions to support customer equipment needs.
