Crown Plumbing & Restoration Expands Drain Cleaning Capacity With Hydro Jetting Upgrade

October 02, 2026

SAN ANTONIO, TX - October 02, 2026 -

Crown Plumbing & Water Damage Restoration has expanded its drain cleaning capacity across San Antonio with an upgrade to its hydro jetting equipment fleet. The investment allows the family-owned company to clear tougher blockages and serve more homeowners throughout Bexar County and surrounding communities.

The upgraded hydro jetting equipment uses high-pressure water streams to remove grease buildup, tree root intrusion, and accumulated debris from residential and commercial drain lines. The enhancement supports the company's existing drain cleaning services, which have long formed part of its broader plumbing and restoration operations.

Hydro jetting has become a common industry standard for addressing recurring clogs that traditional methods leave behind. By adding capacity, Crown Plumbing & Water Damage Restoration aims to reduce wait times and address a wider range of drain and sewer issues in a single visit.

"The expanded hydro jetting equipment gives technicians the ability to resolve stubborn clogs that repeat cleanings alone cannot fully clear," said Jeremy Newman, owner of Crown Plumbing & Water Damage Restoration. "Homeowners across San Antonio deal with grease and root problems every year, and having additional capacity means those problems can be handled thoroughly the first time."

The company, which has served the region since 2006, combines full-service plumbing with in-house water damage restoration, mold remediation, and asbestos abatement. That structure allows the same team to handle both a plumbing failure and any resulting property damage without relying on separate contractors. In cases where a drain or sewer backup leads to contamination, the company also provides sewage cleanup as part of its restoration division.

Newman noted that the equipment upgrade fits into a larger effort to strengthen the company's response to routine and urgent service calls alike. "Drain problems rarely arrive on a convenient schedule," Newman said. "Investing in equipment that works faster and more completely is part of maintaining reliable service for the community."

Beyond drain work, Crown Plumbing & Water Damage Restoration offers emergency plumbing around the clock, along with water heater services, plumbing installation and repair, leak detection, and sewer line inspection and replacement. The company services all of Bexar County and nearby markets from three area locations.

The expanded drain cleaning services are available to residential and commercial customers throughout the company's service area. Crown Plumbing & Water Damage Restoration works directly with major insurance carriers and offers financing options for qualifying projects.
