

# EcoClean Restoration Completes Multi-Room Mold Remediation in Clarksville Home

*October 30, 2026*

TIMONIUM, MD - October 30, 2026 -
EcoClean Restoration, a family-owned restoration company serving the Greater Baltimore area, recently completed a mold remediation project at a Clarksville home where mold originally spotted on a dining room ceiling was later traced beneath the bedroom floor and into the bathroom subfloor. The project demonstrates how moisture and mold can travel well beyond the area where homeowners first notice it.

The situation began when a visible patch of mold appeared on the dining room ceiling, covering roughly 64 square feet. During the initial assessment, the IICRC-certified team discovered that the problem extended far beyond that single room. Mold had developed under the bedroom flooring, affecting about 32 square feet of subflooring, and had also spread into the subfloor of the bathroom.

In the dining room, the team installed containment barriers and ran air scrubbers to prevent spores from spreading, then removed the damaged ceiling sections and applied antimicrobial and peroxide treatments. ULV fogging reached areas that were otherwise difficult to access, and the ceiling was rebuilt with new

drywall. In the bedroom, the affected flooring was removed, the area was treated, and an encapsulant was applied to seal the floor joists before new flooring was installed. The bathroom required the team to disconnect plumbing fixtures to reach the mold beneath the floor, after which the same treatment protocol was followed and the fixtures were reinstalled.

The entire scope of work, which saw hidden mold in a Clarksville home restored in four days, was handled by a single team rather than multiple separate contractors. This coordinated approach allowed containment, removal, treatment, and reconstruction to proceed room by room without gaps in the process.

"When mold shows up in one room, it is often a sign of a larger moisture issue hiding behind walls or under floors," said Cali Wilson, speaking for EcoClean Restoration. "In this Clarksville project, following the moisture from the ceiling to the subfloor helped identify every affected area before reconstruction began."

Wilson added that handling remediation and rebuilding under one team reduces the burden on homeowners. "Many homeowners assume they will need separate companies for mold removal and for rebuilding the spaces afterward," she said. "Keeping the process with one team means the dining room, bedroom, and bathroom were all addressed with the same standards and documentation."

EcoClean Restoration provides mold remediation Clarksville MD residents can turn to for multi-room situations, as well as mold remediation services in Baltimore County and the broader region. The project reflects the company's focus on tracing moisture to its source rather than treating only visible surfaces.

Homeowners who notice mold in a single room are encouraged to have the rest of the home assessed, as early inspection can reveal hidden spread before it affects additional spaces.

EcoClean Restoration is a family-owned, IICRC-certified company based in Timonium, Maryland, serving Towson, Columbia, Clarksville, Perry Hall, Owings Mills, and surrounding communities. The company specializes in water damage restoration, fire damage restoration, storm damage cleanup, mold remediation, reconstruction, and insurance claim assistance, and maintains 24/7 availability for emergency response.
