

Glucosamine Users Suggest Relief from Rheumatoid Arthritis

June 16, 2016

June 16, 2016 - PRESSADVANTAGE -

Orlando, FL ? February 15, 2016 ? Rheumatoid arthritis is one of the several types of arthritic conditions. It doesn't just cause pain but also immobility, which exposes sufferers to a reduced quality of life. While this condition is not widely perceived as fatal like cancer, it has ways of increasing the risk of death of sufferers.

Rheumatologists reveal what kills rheumatoid arthritis sufferers. Hall FC in the Disease Modification and Cardiovascular Risk Reduction stated that: ?individuals who suffer from the condition tend to die at a younger age.? It is believed that the increased mortality is due to vascular disease associated with RA.

Natural supplement brand Divine Bounty shared that many happy users of Glucosamine are sufferers of various conditions including Arthritis. ?Arthritis sufferers often report to us after a couple of weeks noticed improvements allowing them to continue to do what they love with much less pain,? shared media contact Melissa Scott.

Researchers tried to investigate the factors that contribute to the increase in mortality, and one possible cause is the use of disease-modifying anti-rheumatic drugs (DMARDs). Among the possible contributing

factors for earlier death in RA are increasing age and male gender. It is also believed that early death is due to interstitial pulmonary fibrosis and cardiovascular disease. According to statistics, cardiovascular problems accounted for 31 percent of all deaths and 29 percent for pulmonary problems. It was also found that Ischaemic heart disease (IHD) accounted for one-fourth of all deaths.

While many RA sufferers who use natural alternatives such as Glucosamine have the potential to improve their own way of life. Glucosamine users reviews and feedback indicates this is a form of relief RA sufferers should consider.

The use of nonsteroidal anti-inflammatory drugs has also been a subject of debate among researchers. They tried to determine the effects of this pain medication on cardiovascular health. It was found that certain NSAIDs have been linked with an increased risk of adverse cardiovascular events.

However, it is important to note that it has not been established yet whether its effects were associated with the duration of the treatment or the dose.

NSAIDs are a popular remedy for individuals with arthritis. This pharmaceutical drug has been used for years by many arthritis sufferers who want to achieve pain relief and improved mobility. However, the drawback is that it is associated with side effects.

While NSAIDs are helpful for arthritis sufferers, this medication can be detrimental to overall health, especially when used on a long-term basis. The widespread scare in the side effects associated with the use of the pharmaceutical drug has led many sufferers to resort to natural remedies. The connection between the use of NSAIDs and the threat to cardiovascular health is something that arthritis sufferers should not overlook. It is imperative that they determine if harmful effects of these medication outweighs the benefits.

?Glucosamine is believed to be one of the safer alternatives to pain medication,? said Divine Bounty spokesperson, Melissa Scott.

Glucosamine is one of the most popular arthritis remedies nowadays. This naturally-occurring substance in the body is thought to help repair damaged cartilage (<http://www.amazon.com/Glucosamine-Sulfate-Supplement-2000mg-serving/dp/B0126ZF0B0/>).
