

Robinson Restoration Reinforces 90-Minute Emergency Response as Mold Risk Rises Within 48 Hours

October 05, 2026

PASCO, WA - October 05, 2026 -

Robinson Restoration - Tri-Cities has reaffirmed its commitment to a 90-minute emergency response standard for property owners facing water intrusion, citing the narrow window in which mold can begin developing after a leak or flood. Industry guidance indicates that mold growth can start within 24 to 48 hours of water exposure, making rapid mitigation a central concern for affected homeowners and businesses.

The response standard applies across the company's 24-hour emergency service area and reflects growing awareness of how quickly standing water and elevated humidity can compromise building materials. When moisture penetrates drywall, flooring, and structural components, the resulting conditions can create health risks and additional repair costs if left unaddressed.

Robinson Restoration services in Pasco, WA cover a full range of mitigation needs, including water damage restoration, mold remediation, fire and smoke damage restoration, sewage cleanup, and storm damage restoration. Technicians are IICRC certified, indicating adherence to recognized industry standards for

inspection, cleaning, and restoration work.

"The first two days after water enters a home are the most important," said Tyler Robinson, owner of Robinson Restoration - Tri-Cities. "Mold can begin forming within 24 to 48 hours, so arriving on site within 90 minutes allows crews to stop the spread of moisture and prevent a manageable problem from becoming a major one."

The company's emergency water damage cleanup process begins with a free inspection to assess the extent of the intrusion. Crews then work to stop ongoing damage using extraction equipment and drying technology before beginning the restoration of affected areas to their pre-damage condition. The company also coordinates directly with insurance providers to manage claims on behalf of property owners.

Robinson noted that timing often determines the scope of a project. "Many homeowners are surprised by how fast conditions change after a pipe bursts or a storm pushes water inside," he said. "A quick assessment and immediate drying can reduce the amount of material that needs to be removed and shorten the overall recovery timeline."

Beyond initial mitigation, the company offers rebuild and remodel services to return damaged structures to their original condition. For covered claims, the company works to limit out-of-pocket expenses to the policy deductible.

Water damage incidents in the region frequently stem from seasonal storms, frozen or burst pipes, appliance failures, and sewage backups. Each scenario carries distinct risks, and sewage-related events in particular require specialized handling due to the presence of harmful microorganisms. Trained technicians address these situations with protective protocols designed to safeguard occupant health.

Robinson Restoration - Tri-Cities serves the greater Tri-Cities area of Washington State, providing restoration and mitigation services to residential and commercial property owners. The company specializes in water, fire, smoke, storm, and sewage damage recovery, along with mold remediation and reconstruction. As an IICRC certified provider operating on a 24-hour basis, the company focuses on rapid response, thorough mitigation, and coordination with insurance carriers throughout the claims process.
