

Tonneau Cover Selection Expands With Extang Options

October 05, 2026

NORTH SALT LAKE, UT - October 05, 2026 -

Truck owners considering how to cover and access their cargo beds have additional configurations to evaluate in Truck Trim's Extang truck bed cover offerings. Truck Trim carries the manufacturer's products as part of its truck accessory selection, offering options that address different needs for bed access, cargo use, and exterior appearance. The product offering gives customers seeking a tonneau cover an opportunity to compare established cover formats according to the dimensions and everyday use of a particular truck.

The Extang line encompasses several approaches to truck bed coverage rather than a single design. Depending on the specific product selected, available formats can include folding, rolling, and other opening configurations. Each design changes how the bed is accessed and how much of it can be exposed when carrying cargo. That distinction can become important for trucks that alternate between everyday driving and hauling equipment or larger items.

Truck Trim's focus on Extang products also reflects the specialized nature of truck bed accessories. Covers must correspond with specific vehicle and bed configurations, and the intended use of the truck can influence which format makes sense. A cover selected for frequent access to the entire bed may differ from one chosen primarily to keep the bed covered during routine driving. Bed length and vehicle specifications, therefore, remain central to the selection process.

Extang describes engineering and product development as central to its truck bed cover business. According to information provided by the manufacturer, the company has been involved in developing multiple styles and features used in the truck bed cover category. Truck Trim makes those products available to customers seeking vehicle-specific exterior accessories while allowing the manufacturer's own specifications to serve as the source for individual product features and applications.

Cover construction is another point of distinction among available products. Different designs use different structures, surfaces, hinges, rails, and opening mechanisms. Rather than assuming a single configuration will work equally well for every owner, customers can compare these characteristics with how often the bed is opened and what types of items are typically transported.

This becomes particularly relevant when a truck serves multiple purposes. A vehicle may carry tools or supplies during the workweek and recreational equipment on weekends. Other trucks may spend most of their time commuting while occasionally transporting larger cargo. In those situations, the amount of bed access provided by the selected cover can be as important as its exterior profile.

Vehicle compatibility also narrows the available choices. Truck beds differ by make, model, model year, and length, so a cover designed for one configuration may not correspond with another. Truck Trim's product selection allows customers to begin with vehicle specifications before considering differences in operation and construction. This keeps the evaluation centered on products intended for the particular truck.

Extang products are part of a broader selection of exterior truck equipment at Truck Trim. The business also offers running boards and related accessories for owners who are modifying the functionality or exterior configuration of their vehicles. These products address different needs, but each requires attention to compatibility with the truck on which it will be installed.

For customers evaluating a tonneau cover, concrete differences between cover formats can provide a more useful basis for comparison than general descriptions of truck bed protection. A folding configuration, for example, approaches bed access differently from a rolling design. Looking at those functional distinctions alongside vehicle fit helps customers narrow the available products without assuming that a particular style is appropriate for every application.

Truck Trim is a truck accessory business serving truck owners in the Salt Lake City area with bed covers, running boards, and other vehicle-specific exterior equipment. The company offers products from truck accessory manufacturers, including Extang, and assists customers in identifying options that correspond with

their vehicle configurations and intended uses. For more information about available truck bed covers and other accessories, visit <https://www.trucktrim.com/>.
