

Davis and Son Air Conditioning Expands Residential, Commercial, and Industrial Cooling Services

November 11, 2026

MONETT, MO - November 11, 2026 -
Davis and Son, an HVAC and plumbing contractor with more than 40 years of experience in Southwest Missouri, has formally expanded its air conditioning services ahead of the peak summer season. The expansion covers AC repair, new system installation, and seasonal maintenance for residential, commercial, and industrial clients across the region.

The broadened service offering comes as area temperatures climb and demand for reliable cooling increases. Davis and Son Air Conditioning now provides a full range of repair services, including refrigerant recharge, thermostat repair and replacement, compressor repairs, condenser coil cleaning, and emergency repair availability. The company reports that addressing these common issues early helps prevent larger breakdowns during months of heavy system use.

Alongside repairs, the company installs central air systems, ductless mini-splits, and heat pumps, and configures smart thermostats for homes and businesses. Certified HVAC technicians handle installation,

troubleshooting, and repair across all system types. The company also offers maintenance and tune-up services that include filter replacement, duct cleaning, refrigerant checks, thermostat calibration, and system performance testing.

Davis and Son recommends that property owners schedule annual AC maintenance before summer arrives. With proper upkeep, the company notes, cooling systems typically last 10 to 15 years, and regular servicing can reduce the likelihood of mid-season failures.

"The goal with expanding these services is to make sure every client, whether a single-family home or a large industrial facility, has access to dependable cooling when temperatures peak," said a company representative at Davis and Son. "Annual maintenance ahead of summer makes a measurable difference in system reliability and longevity, and that is something the technicians emphasize with every customer."

The company has also broadened its indoor air quality offerings. These solutions include air purification systems, UV light installation, dehumidifiers, and duct cleaning, giving clients additional options for managing comfort and air cleanliness in their spaces.

"Indoor air quality has become a growing focus for homeowners and business operators alike," the representative said. "Pairing cooling efficiency with cleaner indoor air reflects where the industry is heading, and the expanded services are built to meet that demand."

Davis and Son Air Conditioning serves a wide portion of Southwest Missouri, including Barry, Lawrence, Christian, Greene, Jasper, Newton, McDonald, and Stone counties, as well as the cities of Springfield, Cassville, and Monett. Emergency repair availability remains part of the service model, allowing the company to respond to cooling failures during periods of extreme heat.

Davis and Son is a trusted HVAC and plumbing company based in Southwest Missouri, serving the area for more than 40 years with heating, cooling, and plumbing solutions for homes and businesses. The company offers air conditioning, heating, and plumbing services, and is recognized for fast response times, the use of current technology, and a focus on lasting solutions. Its team continues to invest in new technologies and ongoing technician training as it adapts to evolving industry standards and client needs across the region.
