

Monett Veterinary Hospital Expands Pet and Animal Surgery Services With Laser and Radiowave Techniques

November 20, 2026

MONETT, MO - November 20, 2026 -
Monett Veterinary Hospital, an AAHA-accredited, full-service small animal hospital serving southwestern Missouri since 1953, is formally expanding and highlighting its pet and animal surgery services, including advanced laser and radiowave surgical techniques that offer an alternative to traditional methods.

The expanded focus centers on surgical approaches designed to reduce patient discomfort during procedures and recovery. Laser and radiowave techniques seal both nerves and blood vessels as they cut, which results in less pain and bleeding, faster healing, and improved patient comfort. These methods are used for a range of procedures, including tumor removal and various corrective surgeries.

Monett Vet Hospital Pet and Animal Surgery takes place within a sterile surgery suite equipped with patient warming devices, multiple patient monitors, and isoflurane gas anesthesia. Certified technicians monitor patients throughout every procedure, tracking vital signs from the beginning of anesthesia through recovery.

This level of monitoring supports the hospital's standards for patient safety across both routine and complex operations.

Beyond routine surgeries such as spay and neuter, the hospital performs referral surgeries for other local veterinarians. These include orthopedic procedures and corrective operations that draw on the surgical training and equipment available at the facility. In this capacity, the hospital functions as a referral center for the wider veterinary community in the region.

Erin Carnes, a spokesperson for Monett Veterinary Hospital, noted that the surgical program reflects decades of investment in equipment and staff training. "Laser and radiowave techniques allow the surgical team to perform many procedures with less trauma to surrounding tissue," Carnes said. "For pet owners, that often means a calmer recovery for their animal and a shorter healing period after surgery."

Carnes added that the referral work extends the hospital's role in the area. "Other veterinarians in the region refer certain cases to the surgical team, including orthopedic procedures that require specialized training and monitoring," Carnes said. "Serving as a referral center is a responsibility the staff takes seriously, and it reflects the surgical capabilities built here over many years."

The surgical services are part of a broader set of offerings at the facility. Monett Veterinary Hospital provides routine and major surgery, orthopedic surgery, laser surgery, radiowave surgery, radiology, internal medicine, an in-house laboratory, pharmacy services, preventive care, therapeutic and science diets, grooming, boarding, and doggie daycare. The hospital also maintains a wellness care program that combines routine testing, examinations, and vaccinations.

Founded by Dr. C.J. McCormick in 1953, the hospital has grown from a single-veterinarian practice into a comprehensive animal care facility. It received the AAHA Commitment to Excellence Award in 2007 and has been recognized as a Veterinary Economics Architectural Award Excellence winner. The facility serves dogs and cats throughout Monett and surrounding communities in southwestern Missouri.

Monett Veterinary Hospital continues to focus on the health and comfort of animal patients across the region, combining long-standing veterinary experience with current surgical methods and equipment.
