

Larsen HVAC & Plumbing Expands Furnace Repair and Replacement Services for Winter Season

October 07, 2026

WEST JORDAN, UT - October 07, 2026 -
Larsen HVAC & Plumbing, a licensed residential HVAC contractor based in West Jordan, Utah, has announced expanded furnace repair and replacement capacity ahead of the winter heating season, citing a consistent increase in service demand across Salt Lake County as temperatures along the Wasatch Front drop through October and November.

The company, which operates out of its headquarters at 6752 South Airport Road in West Jordan, reports that furnace repair calls accelerate sharply as the heating season begins, with homeowners across communities including South Jordan, Sandy, Taylorsville, West Valley City, Murray, Midvale, and Draper contacting the company for both urgent repairs and planned system replacements. To accommodate the seasonal volume increase, Larsen HVAC & Plumbing has expanded its available service windows and reinforced its same-day repair capacity for qualifying furnace failures.

"When a furnace goes out in the middle of winter, it is not a situation most families can wait days to resolve,"

said Shawn Larsen, owner of Larsen HVAC & Plumbing. "We have structured our scheduling specifically to handle the winter demand surge, so homeowners are not left in the cold waiting for a technician."

Larsen HVAC & Plumbing offers a comprehensive range of furnace repair services covering all major makes and models, with particular expertise in Ruud furnace systems. Repair services address common winter failure points including faulty igniters, malfunctioning gas valves, failing blower motors, cracked heat exchangers, pressure switch issues, and control board failures. The company's technicians hold EPA 608 Universal certification and operate under a Utah Division of Professional Licensing specialty contractor license, with all repair work conducted in accordance with the 2021 Utah State Mechanical Code.

For homeowners facing system failures in aging furnaces, the company provides a clear and practical assessment of whether repair or replacement represents the better long-term investment. According to the U.S. Department of Energy, residential furnaces typically have a service life of 15 to 20 years, and systems operating beyond that range often face diminishing returns on repair costs relative to the efficiency and reliability gains available from modern replacement equipment. Larsen HVAC & Plumbing's technicians conduct this evaluation transparently, presenting homeowners with the full picture rather than defaulting to replacement recommendations.

"Our approach is always to tell homeowners exactly what we found and what their options are," Larsen noted. "If a repair makes sense, we say so. If the system is at a point where replacement is the smarter move financially, we explain that clearly and let the homeowner make the call."

As a Rheem Pro Certified Partner, Larsen HVAC & Plumbing installs Rheem and Ruud furnace systems to manufacturer-defined standards, with all qualifying full-system replacements eligible for a ten-year parts warranty and a lifetime heat exchanger warranty. Warranty registration is handled directly by the company on behalf of the customer, and all new installations carry a one-year labor warranty. For permit-required installations in West Jordan, the company coordinates with the West Jordan Building and Safety Division to ensure work meets city and state code requirements, with customers receiving documentation of permit and inspection completion.

The company's furnace replacement services also incorporate available rebate programs for qualifying high-efficiency equipment. Enbridge Gas Utah's ThermWise program offers financial incentives for homeowners upgrading to high-efficiency natural gas furnaces, and Larsen HVAC & Plumbing technicians assist customers in identifying eligible equipment and navigating the rebate application process during the estimate appointment.

Larsen HVAC & Plumbing serves residential customers across West Jordan and the broader Salt Lake County region, including established communities such as the Copper Hills and Jordan Landing

neighborhoods in West Jordan and the Bangerter Highway corridor. The company maintains 24/7 emergency service availability for urgent furnace failures, with standard service hours running from 8:00 a.m. to 7:00 p.m. For homeowners managing the cost of system replacement, flexible financing options are available through Synchrony Financial.

Founded in February 2017 by Shawn Larsen, who holds an Associate's Degree in Applied Sciences from Salt Lake Community College and more than fifteen years of HVAC field experience, the company has built its reputation in West Jordan on direct technician-to-homeowner communication and transparent service recommendations.

Homeowners in West Jordan and surrounding Salt Lake County communities seeking furnace repair, replacement estimates, or emergency heating service can visit the furnace services page or the main website for more information.
