

822 Heat and Air Expands Commercial HVAC Installation, Duct Replacement, and AC Repair Services

October 29, 2026

Benbrook, TX - October 29, 2026 -
822 Heat and Air has expanded its commercial and residential service offerings to include a broader range of complete heating and air conditioning installation projects across the Greater DFW Metroplex and surrounding suburbs. The expansion addresses growing demand from both large-scale commercial clients and homeowners seeking full-system installation, repair, and ductwork services.

As a commercial and residential heating and air conditioning contractor, 822 Heat and Air specializes in complete HVAC installation for projects of varying size and complexity. The expanded services cover commercial HVAC systems, residential systems, ductwork, and AC tune-up service, allowing the company to support a wider customer base in communities including Crowley, Burleson, Benbrook, Granbury, Joshua, Godley, Cleburne, Alvarado, Fort Worth, Arlington, and Dallas.

The move reflects increased need across the region for comprehensive heating and cooling work, including furnace installation for new and replacement systems. The company reports that many customers experience

uneven heating or cooling, rising energy bills, and weak airflow caused by aging equipment and failing ductwork. In many cases, these issues can be traced to leaking or poorly designed ducts that reduce the performance of otherwise efficient systems.

As part of the expanded offerings, 822 Heat and Air provides HVAC duct replacement for homes and businesses with damaged, disconnected, or deteriorating ductwork. The company also performs duct inspection, diagnostics, sealing, and code-compliant design, with a stated policy of recommending repair rather than replacement when existing ductwork can be effectively restored.

"Expanding our commercial and residential installation capabilities allows the company to meet the needs of more clients throughout the DFW area," said David, a representative of 822 Heat and Air. "Many property owners do not realize how much failing ductwork affects comfort and energy costs, so addressing the full system, from the furnace to the ducts, produces better long-term results."

The company emphasizes that well-maintained ductwork is central to the overall efficiency of any heating and cooling system. Even a high-efficiency furnace or air conditioner can underperform when ducts are leaking, crushed, improperly sized, or poorly designed. For that reason, the expanded services pair installation work with thorough ductwork evaluation.

"Complete installation means looking at every part of the system rather than a single component," David added. "The goal is steady comfort, safe operation, and equipment that performs as intended for both commercial and residential customers."

822 Heat and Air is staffed by licensed, insured, and EPA-certified technicians who work on all major brands and system types. As an HVAC company serving the Greater DFW Metroplex, the business provides a diagnosis before any repair begins, straightforward explanations, and upfront pricing. Services include routine maintenance, heating diagnostics and repair, full system replacements, and ground-up installations for commercial and residential properties.

822 Heat and Air is a professional heating, ventilation, and air conditioning contractor providing commercial and residential services throughout the Greater DFW Metroplex and its suburbs. The company offers commercial HVAC, residential HVAC, ductwork, and AC tune-up service, with a focus on energy efficiency, reliable comfort, and transparent service. The company operates under license number TACLA65080C.
