

North Star Heating & Air Conditioning Highlights Furnace Warning Signs for Lehi Homeowners Ahead of Winter

October 09, 2026

LEHI, UT - October 09, 2026 -

As colder temperatures approach Utah County, North Star Heating & Air Conditioning is drawing attention to the heating-system warning signs that homeowners often overlook until a furnace fails during the coldest weeks of the year. The family-owned contractor is encouraging residents to recognize these early indicators now, while there is still time for inspection and service before winter demand peaks.

Heating systems frequently show subtle signals before a complete breakdown. According to the company, common signs include uneven heating between rooms, unusual noises such as banging or rattling when the system cycles on, a furnace that runs longer than normal to reach the set temperature, and a noticeable increase in energy use without a change in household habits. Yellow or flickering burner flames, frequent short cycling, and persistent dust or dry air can also indicate that a system needs attention.

Terry Kelsch of North Star Heating & Air Conditioning said many of these warning signs are easy to miss

during the mild autumn months. "Furnaces tend to fail when they are working hardest, which is usually during the first real cold snap," Kelsch said. "When a homeowner notices strange sounds, uneven temperatures, or rising utility bills in the fall, those are often the system asking for attention before it stops working entirely."

Addressing concerns early is a central part of North Star Heating & Air Conditioning HVAC planning, which encourages seasonal maintenance rather than reactive emergency calls. The company recommends servicing a furnace in the fall and an air conditioner in the spring, allowing technicians to identify worn components, check safety controls, and confirm that a system is prepared for the season ahead. This approach can help extend equipment life and reduce the likelihood of a mid-winter failure.

For residents who have already noticed trouble, the company provides furnace repair in Lehi and surrounding communities, offering diagnostics intended to pinpoint performance issues before they escalate. North Star Heating & Air Conditioning furnace repair in Lehi covers a range of heating concerns, from inconsistent output to systems that no longer hold a steady temperature.

Kelsch added that heating preparation is part of a larger picture. "A furnace is one piece of a home comfort system," he said. "Looking at the equipment, the ductwork, and the overall airflow together helps a household stay comfortable and avoid surprises when the weather turns."

North Star Heating & Air Conditioning in Lehi serves Utah County, Salt Lake County, and communities along the Wasatch Front, including Alpine, Bluffdale, Draper, Eagle Mountain, Herriman, Orem, Lindon, Pleasant Grove, Riverton, Saratoga Springs, South Jordan, and Vineyard.

North Star Heating & Air Conditioning is a family-owned, second-generation HVAC contractor based in Lehi, Utah, with more than 30 years of experience serving the local community. The company provides heating and air conditioning installation and repair, duct cleaning, indoor air quality improvement, and seasonal maintenance for homes of all sizes.
