Bumper Specialties Highlights Expanded Range of Self-Adhesive Polyurethane Bumpers for Surface Protection

October 13, 2026

WEST DEPTFORD, NJ - October 13, 2026 -
Bumper Specialties, Inc., a global manufacturer of self-adhesive polyurethane rubber bumper feet, is drawing attention to its extensive line of surface-protection components designed to reduce noise, absorb shock, and improve product stability across a growing number of industrial and consumer applications.

The company produces more than 40 distinct shapes of molded polyurethane feet in clear, black, white, brown, and gray. These bumpers are crack-resistant, non-skid, and formulated without plasticizers, oils, or fillers, allowing them to be applied without marring, scratching, or staining surfaces. The self-adhesive backing permits simple application and supports use across furniture, cabinetry, electronics, appliances, displays, and a wide range of manufactured products.

Self-adhesive polyurethane bumpers address a common challenge faced by manufacturers and designers seeking to protect surfaces and minimize damage from repeated contact. The durable polyurethane construction helps dampen vibration while guarding against scratches and scuffs, making the components suitable for both finished consumer goods and components used in manufacturing environments.

"Polyurethane bumpers solve practical problems that affect nearly every type of product, from household furniture to sensitive electronic equipment," said Bob Romanelli, spokesperson for Bumper Specialties. "The material absorbs shock and resists cracking over time, and the self-adhesive backing allows customers to apply the bumpers quickly without additional hardware or fasteners."

Beyond its standard catalog, the company offers custom bumper design services, including special die-cut sheets, customizable packaging, and custom shapes and colors intended to meet specific customer requirements. Full engineering support is available to assist customers in designing a rubber bumper suited to a particular application, from initial concept through production.

Bumper Specialties maintains a large inventory and operates a 100,000 square-foot manufacturing facility with the capacity to produce millions of bumper feet each day. The scale of production allows the company to serve high-volume industrial clients while also accommodating smaller and specialized orders.

The company ships components to more than 70 countries, working with freight forwarders positioned in key international locations to deliver parts in an expedient manner. A multilingual sales team assists customers across different regions, and the company works to identify cost-effective shipping arrangements to help minimize customer expenditures.

"Reaching customers in various countries around the world requires close coordination and a focus on logistics," Romanelli added. "The combination of in-house manufacturing, engineering support, and established shipping relationships allows the team to respond to a broad range of needs, regardless of where a customer is located."

As demand for surface-protection components continues across industries such as furniture, electronics, and appliance manufacturing, Bumper Specialties continues to emphasize the versatility of its polyurethane product line and the availability of custom solutions for specialized applications.

Bumper Specialties, Inc. is a global manufacturer of self-adhesive polyurethane rubber bumper feet based in the United States. The company produces a wide range of products in various shapes, sizes, and colors used in thousands of applications worldwide. Through its manufacturing facility, engineering support, custom design services, and international shipping capabilities, the company serves customers around the world.
