Clinic Details Hormone Therapy Access Ahead of World Menopause Day

October 16, 2026

October 16, 2026 -
Denver Regenerative Medicine is outlining how adults can arrange hormone care through its Fort Collins office ahead of World Menopause Day on Oct. 18, including in-person consultations and virtual follow-up visits, the practice said.

World Menopause Day is held each Oct. 18 and is coordinated by the International Menopause Society to raise awareness of menopause and of the health support available to women during midlife. The Menopause Society, a nonprofit organization for clinicians and researchers, has estimated that about 1.3 million women in the United States reach menopause each year. The organization defines menopause as the point 12 months after a woman's final menstrual period, a transition that typically occurs when a woman is in her 40s or 50s.

A specialist team rotates through the office, where in-person consultations are held, according to the practice's website. Follow-up appointments for hormone care and weight management can then be held virtually, allowing patients to keep scheduled check-ins without an additional trip to the office. The office page lists virtual follow-ups as an option for both hormone and weight management patients. The practice offers hormone care for both women and men, including testosterone therapy and thyroid and adrenal support.

"The goal for the office this fall is straightforward: make it easier for adults to schedule an evaluation, review lab work with a clinician and keep follow-up visits on the calendar," said Joel Cherdack, a doctor of chiropractic and the founder of Denver Regenerative Medicine. Cherdack founded the practice in 2015 and oversees the development of its protocols.

The clinic's medical team includes Andrew Hong, M.D., an interventional pain management specialist. According to the practice, some consultations, imaging and laboratory work may be eligible for insurance coverage, while most of its regenerative procedures are elective and are generally not covered.

The Menopause Society's published position statement on hormone therapy advises that treatment decisions be individualized, taking into account a woman's age, the time elapsed since menopause, her symptoms and her personal health risks. The organization also recommends periodic reevaluation of any ongoing hormone therapy with a qualified clinician, along with a review of the benefits and risks that apply to each patient. The statement is publicly available through the society's website.

In addition to hormone care, Denver Regenerative Medicine provides autologous stem cell procedures, platelet-rich plasma, peptide therapy and medically supervised weight management. The practice publishes a separate page on its website for each office it operates, listing local contact details, visit options and the services available at that location. Each office page also lists a direct local phone number in addition to the practice's main line.

Location and hours for this Denver Regenerative Medicine office are listed at the practice's website. The office can also be reached by phone at (970) 578-3636.
