

PASCAL Expands Couple Watches Assortment With Blue-Dial Pair

October 13, 2026

Los Angeles, CA - October 13, 2026 -

A blue-dial Timeless Classic pair has expanded the PASCAL couple watches range. Published online in August 2026, the pairing joins two dial colors and case sizes within one coordinated design without making the watches identical.

The pairing brings together Blue Galaxy in a 36 mm case and Blue Raspberry in a 31 mm case. Both use radial dial textures, while the two shades give each watch a distinct appearance. PASCAL describes 11 lab-grown diamonds on the deep-blue Blue Galaxy dial; that diamond count is a specification of that watch, not a combined count for the pair.

The Timeless Classic set uses stainless-steel cases, a silver-and-gold-tone steel bracelet, scratch-resistant sapphire crystals, and Swiss Ronda 763 quartz movements. PASCAL specifies 10 ATM water resistance for both watches, along with folding clasps with push buttons. The pair was priced at \$560 when reviewed in September 2026; price and availability may change.

The two case sizes are a practical part of the design. A shared bracelet treatment and dial texture establish the relationship between the watches, while the different diameters give each piece a separate scale. The 31 mm and 36 mm cases preserve the same visual theme without requiring identical proportions.

Other PASCAL diamond couple watches in the Timeless Classic family take different approaches to coordination. Rose Radiance and Ice Age combine pink and blue dials in silver-tone steel, while another pairing brings together two navy-blue sandstone dials.

Both pairs share a case family and movement while leaving room for individual color choices. Rose Radiance and Ice Age can be paired as 31 mm and 36 mm watches or as two 31 mm watches, according to the currently available configurations. That choice changes the relationship between the pieces without changing the pink-and-blue dial combination.

Timeless Classic is not the only design language in the watch range. An Octagonal pair combines a green marble-pattern dial with a brown wood-grain dial.

Both watches share gold-tone stainless-steel construction, an octagonal case, Roman numeral dial markers within an enamel-framed case, and lab-grown diamond accents. The case measures 27 by 29 mm, creating a different geometry from the round Timeless Classic pieces.

PASCAL specifies sapphire crystals, quartz movements, steel bracelets, and 3 ATM water resistance for the Octagonal pair. The price was \$470 when reviewed. The two dial treatments provide the contrast; the consistent case outline and bracelet connect the watches visually.

Paradoxe introduces a third interpretation. Instead of a conventional round case, Paradoxe uses an elongated, fluid outline, a leather strap, and diamond detailing around the central opening. Current pairings combine light and dark treatments.

PASCAL specifies a Swiss Ronda 751 quartz movement, a scratch-resistant sapphire crystal, and a 30 by 44 mm case for the Paradoxe watch design. Product specifications describe 0.28 carats of diamonds around the center and a 0.02-carat inverted-set diamond on the crown of each watch. The leather strap can be changed without altering the case design.

The Paradoxe designs illustrate how a coordinated set can be defined by shape rather than identical dial color. Black and white treatments create contrast, while the case silhouette remains recognizable across the pair. PASCAL specifies 3 ATM water resistance and an interchangeable leather strap for this design; these specifications differ from those of the steel-bracelet Timeless Classic watches.

Across these three families, the common idea is coordination without forcing sameness. Timeless Classic uses related round cases in two diameters, while Octagonal keeps the sculpted outline consistent and changes the dial pattern.

Paradoxe uses a more fluid case to tie contrasting color treatments together. Each pair makes a different design decision about what should match and what can remain individual. Each paired configuration identifies the two color and size choices together instead of presenting two unrelated individual purchases.

Those differences give two people specific decisions to make when choosing watches together. Case size changes the watch's proportions on the wrist, while dial color can echo jewelry or clothing already worn.

A steel bracelet also has a different texture and structure from leather. Related design details connect the watches without requiring two identical models.

PASCAL currently offers paired Timeless Classic, Octagonal, and Paradoxe designs. Several watches come in more than one color or size combination, so the number of pairings is not the number of unique designs. The blue-dial Timeless Classic addition joins established options and shows how a shared watch design can connect two distinct looks.
