

Revival Products Opens Pre-Order for GLIDE Exterior Surface Refinement

October 09, 2026

PENSACOLA, FL - October 09, 2026 -

Revival Products has opened a limited pre-order for GLIDE, an exterior surface refinement formula the company lists as shipping in one to two weeks. The product appears on the Revival Marine Care shop as a single-bottle maintenance item for light contamination, separate from the brand's oxidation compounds, rust treatments, and longer-interval coatings. The listing describes limited supply and marks the item as a pre-order rather than as in-stock inventory.

Drake Robert, owner and founder, formulated the Revival Marine Care line on the Gulf Coast of Florida after starting a boat detailing business in 2014 and marine detailing education in 2019 through Drake's Detailing. The company says formulas are tested on working boats before they receive a label. That standard is a company statement. Revival Products has not published an independent laboratory method, sample size, or third-party report for GLIDE.

The shop describes GLIDE as a combination of lubrication and surface cleaning intended to lift fingerprints, water spots, light grime, black streaks, dust, and everyday contamination while leaving a slick finish. Listed compatible surfaces include gel coat, painted surfaces, glass, isinglass, marine electronics and screens, vinyl

seating, countertops, stainless surfaces, and other compatible exterior and interior surfaces. The page also says the same bottle can be used on the truck or sport utility vehicle that towed the boat. Those uses are manufacturer descriptions of intended surfaces, not verified performance results on every material.

Robert said the product was built for the interval between full details. "A full wash and correction still belong on a set schedule," Robert said. "GLIDE is for the day the boat does not need that work but still has water spots, fingerprints, and light film on gel coat, glass, and stainless. It is a maintenance bottle, not a replacement for cutting oxidation or removing rust."

The company places GLIDE in the clean section of the shop, alongside Wash & Wax Boat Soap, Rust Stain Remover, Corrosion Blocker, Intense Clean, Mold & Mildew Cleaner, and Surface Prep Spray. Wash & Wax Boat Soap is described as a non-alkaline wash meant to remove salt and grime without stripping an existing protective layer. Rust Stain Remover is described as a concentrated gel for iron marks. Those items address different contamination than the light film GLIDE is written for. Revival Products has not stated that GLIDE removes heavy oxidation, mold staining, or set rust.

Correction and protection products remain listed separately. Heavy Cut Compound and Medium Cut Compound are described for oxidation removal. Polish & Protect is described as a one-step polish and polymer sealant. Premium Boat Wax, Ceramic Spray, and Marine Ceramic Coating are described as protective layers, with duration claims that vary by listing and are manufacturer statements. The company has not said GLIDE replaces those steps. Its own page frames the bottle as the item an owner reaches for when the boat does not need a complete wash.

The pre-order note is the current operational fact. The product page states limited supply, pre-order available, and shipment in one to two weeks. Revival Products has not published a production volume, a launch date beyond that shipping window, or a list of regions excluded from the pre-order. International checkout on the shop is described elsewhere as available where an address can complete checkout, with import duties left to the buyer. That shipping note is general company policy, not a GLIDE-specific guarantee.

Robert said the formula grew out of the same on-water routine that produced the rest of the line. "Most of the time on a boat is not a full correction," he said. "It is screens, isinglass, stainless, and gel coat picking up spots between jobs. GLIDE is the bottle we wanted on the boat for that work, after it had been used on real surfaces in the field."

The mission page says a product does not receive a label if it does not perform in real conditions. Educational material on the site covers washing, rust stain removal, light oxidation, and ceramic spray application. GLIDE is not yet the subject of those guides.

The company continues to offer a Revival Pro path for professional detailing businesses, with limited applications noted for 2026. That program is separate from the GLIDE pre-order. Applicants must operate a detailing service, maintain a business website or social page, and complete an interview. The brand's stated standard, written by Robert, is to leave a boat and a job better than they were found.

Revival Products, operating as Revival Marine Care, develops marine cleaning, correction, and protection products formulated on the Gulf Coast of Florida by Drake Robert. Robert began boat detailing in 2014 and marine detailing education in 2019. The company sells individual products and sequenced kits for owners and professional detailers, and it has opened a limited pre-order for GLIDE as an everyday surface refinement formula.
