

Encore Data Products Expands Lineup with QOMO Classroom Response Systems for Interactive Learning

October 20, 2026

LAFAYETTE, CO - October 20, 2026 -

Encore Data Products has expanded its lineup of audience response technology for schools and businesses with the addition of QOMO classroom response systems designed to support interactive instruction and real-time assessment.

The expanded offering centers on two devices that allow educators and presenters to gather instant feedback from participants during lessons, meetings, and events. The QOMO QClick QRF300 Audience Response System provides a straightforward option for classrooms seeking to introduce response technology. Both systems are now available through Encore Data Products as part of its audience response category, giving institutions access to tools that fit a variety of instructional and presentation settings.

Response technology has become increasingly common in education as instructors look for ways to measure comprehension during a lesson rather than only through later testing. These systems let students respond to questions in the moment, giving teachers immediate insight into which concepts require further review. The

approach supports participation across a range of grade levels and subject areas, and it has drawn attention from institutions seeking alternatives to traditional assessment methods.

A representative at Encore Data Products, said the addition reflects ongoing demand from educators for tools that keep students engaged. "Teachers continue to tell us they want technology that fits naturally into the flow of a lesson," the representative said. "Audience response systems give instructors a clear picture of how a class is following along, and that information helps them adjust their teaching on the spot."

For environments that require broader functionality, the QOMO QClick QRF500 Audience Response System offers additional capabilities beyond the entry-level option. The two devices address different needs, allowing schools and organizations to select a configuration that matches the size of a group and the scope of a session.

The systems are also applicable beyond the classroom. Businesses, libraries, and organizations that host presentations and training sessions can use the technology to collect responses from attendees, conduct polls, and support participation during group settings. The devices function in settings that range from a fifth-grade classroom to a corporate training room.

"What makes response technology practical is its simplicity," a representative said. "Participants can answer a question with a single device, and presenters receive the results right away. That immediacy is useful across many different environments." According to representative, the format reduces the time instructors spend gathering and tallying responses by hand.

Devices such as QOMO's QClick audience response clicker join an existing catalog of audio and technology products that Encore Data Products supplies to educational and professional customers. The company offers the systems alongside related classroom and presentation equipment, allowing institutions to source multiple components from a single provider.

Encore Data Products reports that interest in interactive learning tools has grown as schools continue to invest in technology that encourages active participation. The company plans to continue evaluating additional products within the audience response category to meet the needs of its customers.

Encore Data Products is a provider of audio and technology products for schools, libraries, and businesses. Based in Lafayette, Colorado, the company supplies headphones, AV technology, clean and healthy supplies, and AV accessories. Its product range includes school headphones, headphones with microphones, charge and sync systems, document and web cameras, PA systems and microphones, language interpretation systems, and equipment for podcasting, streaming, and esports. The company serves educational institutions and organizations seeking reliable technology for learning and communication

environments.
