

Plumbing Supply and More Expands Authorized Myers Pump Lineup for Well, Sump, and Sewage Applications

October 13, 2026

Caln Township, Pennsylvania - October 13, 2026 -

Selecting the correct pump for a given water-handling job remains one of the most consequential decisions a contractor or homeowner can make, and industry data consistently shows that mismatched equipment is among the leading reasons pumps underperform or fail before their expected service life. Choosing the wrong Myers pump type or horsepower for an application, whether a shallow well, a deep well, a residential basement sump, or a commercial sewage system, can lead to short cycling, inadequate flow, and premature replacement. For that reason, dealer expertise and inventory depth often matter as much as the pump itself.

Plumbing Supply and More, an authorized dealer, carries a Myers pump lineup built to address that range of applications. The catalog spans submersible well pumps, including multi-stage stainless steel deep well models, along with jet pumps suited to shallow well applications. For basement flood protection, the company stocks sump pumps in both submersible and pedestal configurations, and it offers sewage and effluent pumps for wastewater management as well as specialty options such as emergency flood pump kits. Construction materials range from stainless steel to cast iron for corrosion resistance across residential and light commercial settings.

The practical differences between pump types often guide the right choice. Submersible pumps are generally better suited to flood-prone basements because they operate fully underwater and more quietly, while pedestal pumps provide easier motor access and a lower upfront cost for moderate-moisture applications. Sizing a unit with some reserve capacity above current demand can also help owners avoid premature replacement as needs grow over time.

To help buyers navigate those variables, the company provides technical guidance through an in-house technical advisor who works with contractors and homeowners to match horsepower, flow rate, and head capacity to the specific application rather than estimating from a limited retail selection.

"The difference between a pump that lasts and one that fails early usually comes down to matching the equipment to the job," said a spokesperson for Plumbing Supply and More. "A deep well, a shallow well, and a commercial sewage line each place different demands on a pump, and getting the horsepower, flow, and head capacity right from the start is what prevents problems later."

The availability of the Myers Pump on Plumbing Supply And More reflects the company's broader positioning as a full-service supply house. The business stocks more than 20,000 parts across multiple warehouses, offers wholesale pricing, provides shipping on qualifying orders, and maintains a 30-day return policy. That depth positions the Plumbing Supply And More Myers Pump selection as a trade-grade source compared with the narrower assortment typically found at general retail outlets.

"Inventory depth means a contractor does not have to settle for whatever happens to be on a nearby shelf," the spokesperson added. "Having the full range on hand lets buyers select the correct unit instead of adapting a job to the wrong pump."

Plumbing Supply and More is a supply house with 75 years of operation, offering professional-grade plumbing and HVAC supplies at wholesale prices. Contractors and homeowners can browse Myers pumps at plumbingsupplyandmore.com.
