

Nadosei Releases 2026 NMN Buyer's Guide That Compares 13 Brands

October 13, 2026

MIAMI BEACH, FL - October 13, 2026 -
Nadosei, the longevity brand of Nadosei Labs LLC, released a 2026 buyer's guide on October 11 that compares 13 NMN supplement brands sold in the United States. It sets the brands side by side on dose per serving, ingredients, lab reports, manufacturer details and guarantees, the facts that shoppers need before a purchase.

Its release comes about one year after a key regulatory change for NMN (nicotinamide mononucleotide). On September 29, 2025, the FDA stated that NMN is not excluded from the definition of a dietary supplement. The statement reversed the agency's 2022 position and restored NMN as a lawful supplement ingredient in the US. The FDA does not approve dietary supplements before sale, so each brand decides how much test information it shares with buyers.

Nadosei's editorial team read the product page, store data, quality page and refund policy of each brand on October 11, 2026, the way a US shopper sees them. Each product gets the same eight facts, more than 100

data points in total, with a source page for every brand. The work relies only on what the brands publish, so any reader can verify every page.

The review found that four of the 13 brands publish a certificate of analysis (COA) for a named production batch that any shopper can open online. A COA is a lab report for one batch, also called a lot. A useful one shows the batch number, the test date, the laboratory and the measured NMN content. Two more brands post only partial documents: one shows its report as an image in a pop-up window, and another posts a file with the label of a different product.

Few brands say who tests or makes their products. Three of the 13 name the laboratory that tested the product, and one more shows the lab only in a file name. One brand names its manufacturer, and one more gives partial manufacturer details.

Refund terms vary just as widely. Most refund windows run from 30 to 100 days, but some cover only unopened products or a first order. One policy pays a refund only if a blood test shows no rise in the customer's NAD level.

The guide also flags pages that contradict themselves. One brand lists different guarantee windows on its two websites, and another shows two return windows on one site, 30 days and seven business days. Nadosei left out four more NMN products because their pages did not allow a fair check, for example a product page with two different serving sizes.

Beyond transparency, the comparison covers capsules, powders and a lozenge, with labeled doses from 300 mg to 1,000 mg of NMN in each serving. It explains how NMN-only products differ from blends that pair NMN with other compounds. It also matches products to different buyer needs, such as a public lab report, a high dose or a multi-ingredient formula.

The guide closes with a buyer's checklist in plain language. It asks shoppers to compare the dose per serving rather than per bottle and to match the lot number on a COA to the bottle in hand. It also asks them to find the names of the lab and the maker, to read the exact refund terms and to watch for pages that contradict themselves.

The same checks work for any NMN product, whatever the brand. Shoppers who search for terms such as "nmn nad booster" or "nad booster nmn" can apply them to every result before they buy.

Nadosei sells its own NMN formula, includes that product in the review, and states this at the start of the page. The Miami Beach company also publishes a library of articles on NMN, NAD+ and healthy aging.

The full NMN brand comparison is free to read on the Nadosei website. Visit nadosei.com to learn more.
