

Rebuild Regen Medical Clinic Opens Physician-Supervised Practice

October 15, 2026

LIGHTHOUSE POINT, FL - October 15, 2026 -

Rebuild Regen Medical Clinic has opened a physician-supervised medical practice at 3320 N Federal Hwy, Suite 101. The clinic is led by Medical Director Dr. Cedric Emden Davis II, MD, and it focuses on regenerative medicine, hormone care, and non-surgical approaches to musculoskeletal and nerve pain.

Dr. Davis is a Florida-licensed physician (license ME108693) with nearly two decades of clinical experience in outpatient and hospital settings. He oversees the clinic's clinical protocols, including all stem cell and other biologic procedures, which are performed under physician supervision.

"Our aim in opening the clinic was to make the first visit about diagnosis," said Dr. Davis. "Patients start with an evaluation and appropriate testing, and any recommendation follows from what that work shows."

The practice's services fall into three areas. Regenerative care includes platelet-rich plasma (PRP) injections, stem cell therapy, and exosome therapy. Hormone care includes hormone replacement therapy, testosterone replacement therapy, and peptide therapy, and pain care includes shockwave therapy, Class IV laser therapy, and spinal and knee decompression.

Stem cell and exosome products are not FDA-approved to treat most conditions, and the clinic does not claim that any of its services will resolve a medical condition. Eligibility for any treatment depends on an individual medical evaluation, and some patients will not be candidates. As with any medical care, the services carry potential risks and side effects. Laboratory results and physical examination guide which options, if any, a physician considers appropriate.

The clinic also offers a structured program for chronic soft-tissue pain, combining shockwave therapy with therapeutic ultrasound over a six-week course of twelve visits. Its neuropathy care begins with an evaluation of the likely cause of a patient's nerve symptoms before any treatment is planned.

Hormone and peptide care at the clinic follows the same sequence of evaluation first. Patients considering

hormone or testosterone replacement complete blood work before a plan is written, and follow-up testing is used to review whether a plan should continue, change, or stop.

The practice is one of five separately operated Rebuild practices that share a single medical building, each with its own suite, phone line, and scope of care. The others are Rebuild Therapy Infusions Center, Rebuild Weight Loss Center, Rebuild Hair Restoration, and Rebuild Med Spa. All five operate under the same Medical Director, which keeps clinical oversight consistent while each practice concentrates on a narrower area of care.

The clinic is open Monday through Friday, with hours that vary by day. Hours and directions are listed on the clinic's Google Business Profile, and the office can be reached at (954) 953-4208.
