

Tuck & Howell Plumbing, Heating & Air Highlights Early Warning Signs of Heating System Trouble Before Winter

October 16, 2026

GREENVILLE, SC - October 16, 2026 -

As cooler temperatures approach, Tuck & Howell Plumbing, Heating & Air is drawing attention to the common warning signs that may indicate a home heating system needs professional evaluation before the coldest months arrive. The company, which has served the Greenville area for more than five decades, notes that recognizing these signs early can help homeowners address concerns ahead of peak heating season.

According to the company, several symptoms often appear before a heating system fails outright. Unusual noises such as banging, rattling, or squealing can signal mechanical wear. Strange odors when a system first turns on may point to dust buildup or other issues that warrant inspection. Systems that struggle to start, heat inconsistently from room to room, or produce weak airflow may also be indicating underlying problems. Short cycling, in which a system repeatedly turns on and off in brief intervals, is another sign that professional attention could be appropriate.

The company explains that these symptoms can stem from a range of causes, including worn components, airflow restrictions, thermostat malfunctions, or systems that have simply aged beyond efficient performance. A professional evaluation can help identify the source of a problem before colder weather places additional demand on heating equipment.

"When a heating system shows signs like odd noises, uneven warmth, or short cycling, those are often early indicators rather than isolated events," said Jay Mahaffey of Tuck & Howell Plumbing, Heating & Air. "Addressing them before winter arrives allows homeowners to understand the condition of their equipment and plan accordingly, rather than waiting for a failure during the coldest stretch of the year."

The company emphasizes that routine maintenance plays an important role in keeping heating systems operating efficiently and extending their service life. Regular care can help reduce the likelihood of unexpected breakdowns and allow technicians to catch minor issues before they develop into larger ones.

Tuck & Howell Plumbing, Heating & Air provides heating service in Greenville along with installation, maintenance, and repair for furnaces, heat pumps, and geothermal systems. The company notes that homeowners who notice any of the described warning signs may benefit from a professional assessment as part of seasonal preparation.

"Many families in this area have relied on the same heating systems for years, sometimes across generations of a single household," Mahaffey added. "Our focus is helping those homeowners stay informed about the equipment that keeps their homes comfortable through the winter months."

Tuck & Howell Plumbing, Heating & Air in Greenville has provided home services to the community for over fifty years. The company offers a range of heating, cooling, and plumbing services, including air conditioning installation and repair, heating installation and repair, heat pumps, geothermal systems, and various plumbing services. Additional offerings include ductwork, duct-free systems, indoor air quality solutions, crawlspace encapsulation, and attic insulation. The company serves homeowners throughout Greenville, South Carolina, and the surrounding area, and provides financing options, service agreements, and emergency response for urgent heating, cooling, and plumbing needs.
