

Kozie Clothes Introduces Sensory Friendly Clothing Guidance for Halloween Costumes

October 22, 2026

POTTSTOWN, PA - October 22, 2026 -

Kozie Clothes, a manufacturer of adaptive and sensory apparel for children, has released new guidance to help families create Halloween costumes that reduce discomfort for children with sensory sensitivities. The guidance arrives ahead of the Halloween season, when traditional costumes made from scratchy fabrics, stiff seams, and restrictive materials can cause distress for children who experience the world differently.

The seasonal resource outlines how everyday compression apparel can serve as a comfortable base layer beneath costumes, allowing children to participate in trick-or-treating and school celebrations without the irritation that often accompanies store-bought outfits. The approach pairs familiar clothing with simple costume accessories, giving caregivers a path to inclusive holiday participation.

Founded in 2013 by Susan Donohoe, Kozie Clothes specializes in Sensory Friendly Clothing designed to support children with autism spectrum disorders and other sensory processing conditions. The company's product line includes weighted vests, compression shirts, and flat seam fabrics, each developed to minimize unwanted sensory input.

Many costumes rely on costume-grade materials, synthetic masks, and tight elastic that can overwhelm children with heightened sensitivities. According to the company, using soft compression garments as a foundation can provide calming proprioceptive input, the deep-pressure sensation that helps some children feel grounded and regulated during stimulating environments such as crowded neighborhoods or classroom parties.

"Halloween should be a night of joy, not a source of stress, and far too many families skip it because traditional costumes simply do not work for their child," said Susan Donohoe of Kozie Clothes. "By starting with a comfortable compression base layer, caregivers can build a costume their child will actually want to wear from start to finish."

The guidance includes costume concepts built on compression apparel, ranging from animals and superheroes to community helpers. Each concept emphasizes comfort and ease of movement while still allowing children to express creativity and take part in the holiday alongside peers.

Donohoe noted that the resource also addresses the underlying reasons sensory-friendly options matter during the holiday. "Understanding how a child experiences overstimulation changes how families prepare," she said. "Small adjustments to fabric, fit, and texture can make the difference between a child who feels overwhelmed and a child who feels confident."

Beyond seasonal considerations, the company reports growing interest from parents, occupational therapists, and educators seeking clothing solutions that support daily comfort and focus. The Sensory Friendly Clothing category has expanded in recent years as awareness of sensory processing conditions has increased across schools and healthcare settings.

Kozie Clothes offers a range of products in addition to its sensory line, including medical adaptive clothing designed to accommodate equipment and procedures, an accessory line featuring weighted blankets and toys, and custom solutions tailored to individual needs. The company has established itself as a resource for families navigating both sensory and medical considerations.

Kozie Clothes is a children's apparel company specializing in sensory and adaptive clothing. Established in 2013 by Susan Donohoe, the company designs and manufactures products intended to support children with sensory processing disorders and special medical needs through thoughtful fabric selection, construction, and design.
