

Tuck & Howell Plumbing, Heating & Air Highlights When Homeowners Need Camera Inspections

October 22, 2026

SIMPSONVILLE, SC - October 22, 2026 -

Tuck & Howell Plumbing, Heating & Air is drawing attention to the diagnostic situations in which Simpsonville homeowners may benefit from a plumbing camera inspection, a service designed to locate hidden problems inside pipes and sewer lines without unnecessary excavation.

Many household plumbing issues remain out of sight until they create visible symptoms. Recurring drain backups, unexplained slow drainage across multiple fixtures, gurgling sounds, and water pooling in unexpected areas can all point to problems deep within a line. A camera inspection allows a technician to send a small, flexible camera into the plumbing or sewer line to view the interior in real time, identifying blockages, root intrusion, cracks, corrosion, or collapsed sections.

The company notes that camera inspections are particularly useful when a problem returns after a standard cleaning. When backups recur despite repeated attention, the underlying cause often sits further along the line than a surface-level fix can reach. A visual inspection helps pinpoint the exact location and nature of the

issue, which supports a more targeted repair.

Homeowners considering the purchase of an older property also turn to camera inspections before closing. Aging clay or cast-iron lines are prone to root intrusion and deterioration, and an inspection can reveal conditions that may not otherwise be apparent during a routine walkthrough.

"A camera inspection removes the guesswork from plumbing diagnostics," said Jay Mahaffey, owner of Tuck & Howell Plumbing, Heating & Air. "Instead of estimating where a problem might be, a technician can see the inside of the line and identify the exact cause. That means homeowners understand what they are dealing with before any repair work begins."

The service addresses a common frustration among property owners who experience repeated drainage trouble without a clear explanation. By viewing the interior of a line directly, technicians can distinguish between a simple clog and a more serious structural concern such as a cracked pipe or a bellied section that collects debris.

"Recurring issues are often a sign that something structural is happening below the surface," Mahaffey added. "Catching those conditions early through an inspection gives homeowners the information they need to make decisions on their own timeline rather than during an emergency."

Tuck & Howell Plumbing, Heating & Air - Simpsonville serves Greenville and the surrounding communities, offering plumbing camera inspections alongside its broader range of diagnostic and repair services. The inspection process is intended to shorten the time between identifying a symptom and determining a solution, reducing the likelihood of repeated service visits for the same unresolved problem.

Tuck & Howell Plumbing, Heating & Air is a home services company based in Simpsonville, South Carolina. The company provides air conditioning, heating, and plumbing services to Greenville and surrounding areas. Its plumbing offerings include backflow prevention, water treatment, sewer and drain services, water heaters, and diagnostic camera inspections. The company also provides heating and cooling installation, maintenance, and repair, along with services related to indoor air quality, ductwork, duct-free systems, crawlspace encapsulation, and attic insulation.
