

Outdoor Lighting Concepts Reports Rising Demand for Low Voltage Lighting Installation in Boca Raton

October 19, 2026

BOCA RATON, FL - October 19, 2026 -
Outdoor Lighting Concepts in Boca Raton is reporting a notable increase in requests for professional low-voltage landscape lighting as area homeowners expand their outdoor living habits into the evening hours throughout the year. The company attributes the trend to a broader shift in South Florida toward outdoor entertaining spaces, including patios, gardens, and poolside areas that remain in use well after sunset.

The warm Florida climate allows residents to spend extended time outdoors across all seasons, and lighting has become a central part of how those spaces function after dark. According to the company, inquiries for landscape lighting have grown as households look to make their outdoor areas usable, navigable, and comfortable during nighttime hours.

Low-voltage systems have gained attention because they operate at reduced electrical levels, making them well suited for residential gardens, pathways, and hardscape features. These systems are commonly used to illuminate walkways for safety, highlight landscaping and architectural details, and define outdoor gathering

spaces. The company notes that low-voltage lighting installation in Boca Raton has become a frequent request among homeowners seeking to extend the use of their properties into the evening.

"The way people use their yards has changed," said Spencer Freiman, principal at Outdoor Lighting Concepts. "Outdoor spaces are no longer reserved for daytime. Families are dining, entertaining, and relaxing outside well into the night, and proper lighting is what makes that possible. The surge in demand reflects how central the outdoor environment has become to everyday living in this region."

The company works with residential and commercial clients to design lighting plans tailored to each property. Services include pathway lighting, garden lighting, accent lighting, hardscape lighting, and lighting for water features such as fountains and waterfalls. Additional offerings include lighting control automation, color-changing systems, and proactive maintenance to keep installed systems operating as intended.

Freiman added that professional design and placement play a significant role in the performance of an outdoor lighting system. "Lighting is about more than brightness. It involves understanding how a space is used, where shadows fall, and how fixtures interact with landscaping as it grows. A well-planned system supports both function and the overall character of a property."

The company points to several factors behind the growing interest, including the appeal of safer pathways, greater usability of outdoor areas, and increased attention to the appearance of homes after dark. As outdoor living continues to expand across the region, the company expects demand for professional installation to remain strong.

Outdoor Lighting Concepts is a landscape lighting contractor based in Boca Raton, Florida, serving residential and commercial clients. The company designs and installs a range of outdoor lighting solutions, including curb appeal lighting, deck and patio lighting, pathway lighting, accent lighting, and permanent holiday lighting. Additional services include outdoor audio systems, color-changing lighting systems, and ongoing maintenance. The company has received industry recognition for its work and offers design consultations for prospective clients.
