

Outdoor Lighting Concepts Expands as Houston Exterior Lighting Company Meeting Outdoor Living Demand

October 19, 2026

October 19, 2026 -
As more homeowners across the region transform their yards into after-dark living spaces, Outdoor Lighting Concepts in Houston, Texas, is responding to rising demand for energy-efficient landscape and architectural lighting that improves safety, security, and curb appeal. The company reports growing interest in low-voltage LED systems as outdoor living continues to reshape how residents use their properties once the sun goes down.

Low-voltage systems use less electricity than traditional outdoor lighting and are safer to handle during installation and service. The company applies these systems across a range of applications, including accent lighting for architectural features, garden and hardscape lighting, pathway lighting for safety, and lighting control automation that allows homeowners to manage their systems with ease. Additional offerings include color-changing landscape lighting, permanent holiday lighting, and outdoor audio installations.

The trend reflects a broader shift in home design. Decks, patios, gardens, and walkways that once sat unused after dusk are increasingly treated as extensions of the home. Strategic lighting makes these spaces usable at night while addressing practical concerns such as slip hazards along pathways and visibility near entry points. Outdoor Lighting Concepts, a Houston exterior lighting company specializing in custom low-voltage LED design, installation, and maintenance, has positioned energy-efficient illumination as a standard rather than a luxury.

"Outdoor spaces have become central to how people live and entertain, and lighting is often the piece that makes those spaces work after dark," said Mike Hackemack of Outdoor Lighting Concepts. "Residents want their yards to feel welcoming and secure at night, and energy-efficient design makes that possible without a significant increase in operating costs."

The company works with both residential and commercial clients. On the residential side, services range from curb appeal lighting at the front of a home to deck, patio, and waterfall lighting that highlights outdoor features. Commercial clients, including hotels, restaurants, and parks, use similar solutions to improve ambiance and safety across their properties. A rendering service allows clients to visualize a lighting design before installation begins, and proactive maintenance supports the longevity of installed systems.

"Good lighting is about more than appearance," Hackemack said. "Well-placed fixtures reduce hazards, improve visibility around a property, and extend the hours a family can enjoy their outdoor space. That combination of function and design is what continues to drive interest across the area."

The company also offers franchise opportunities for individuals interested in entering the landscape lighting industry with the support of an established operation. Its online gallery documents completed projects, giving prospective clients a view of the range of styles and applications available.

Outdoor Lighting Concepts is a landscape and architectural lighting design company based in Houston, Texas. The firm provides custom low-voltage LED design, installation, and maintenance for residential and commercial clients, with services that include landscape lighting, pathway and hardscape lighting, lighting control automation, color systems, outdoor audio, and permanent holiday lighting. Through its focus on energy-efficient solutions, the company aims to enhance the aesthetic appeal, functionality, and safety of outdoor spaces throughout the region.
