

Outdoor Lighting Concepts Expands Austin Garden Lighting Service With Enhanced Energy-Efficient Systems

October 20, 2026

October 20, 2026 -

Outdoor Lighting Concepts, LLC, a landscape lighting designer based in Austin, Texas, has expanded its residential offerings to meet growing regional demand for energy-conscious outdoor illumination. The company now places added emphasis on Outdoor Lighting Concepts low voltage outdoor lights across its design and installation projects, reflecting a broader shift among Texas homeowners toward systems that balance aesthetics with reduced energy consumption.

The expanded focus arrives as more property owners in Central Texas seek to extend the usability of their outdoor spaces into the evening hours. Low voltage systems operate at reduced power levels compared with traditional line-voltage installations, offering a safer and more adaptable approach to illuminating gardens, pathways, patios, and architectural features. The approach aligns with regional interest in outdoor living environments that remain functional throughout the warmer months.

Through its Austin garden lighting service, the company designs and installs fixtures intended to highlight landscape features such as gardens, water elements, and hardscape details. Each project begins with a design consultation that maps out fixture placement, brightness levels, and control options. The company reports that garden-focused projects remain among the most frequently requested among residential clients in the area.

"Homeowners across the region are thinking more carefully about how their outdoor spaces function after dark," said Ryan Zimmerman, a representative of Outdoor Lighting Concepts. "The expanded emphasis on low voltage technology allows the design team to create layered, flexible lighting plans while keeping energy use in check. The goal is to match each installation to the specific features of a property rather than applying a one-size-fits-all template."

In addition to garden and landscape illumination, the company provides curb appeal lighting, deck and patio lighting, accent lighting, waterfall lighting, hardscape lighting, pathway lighting, and lighting control automation. Rendering services allow clients to preview how a completed design will appear before installation begins. The company also serves commercial clients, designing systems that illuminate signage, highlight architectural features, and support safety around business properties.

Beyond lighting, Outdoor Lighting Concepts offers color systems that allow clients to adjust the tone and mood of their outdoor spaces, along with outdoor audio installations built to withstand exposure to the elements. Proactive maintenance services round out the company's offerings, with regular inspections, cleaning, bulb replacement, and system checks designed to keep installations operating as intended over time.

"Maintenance is often overlooked, yet it determines how a lighting system performs years after installation," Zimmerman added. "The team treats ongoing care as an integral part of every project, not an afterthought."

Outdoor Lighting Concepts, LLC is a landscape lighting designer headquartered in Austin, Texas. The company provides residential and commercial lighting design and installation, color systems, outdoor audio, and proactive maintenance. Services include a design consultation and a range of lighting applications spanning gardens, pathways, patios, hardscapes, and architectural features for homes and businesses throughout the Central Texas region.
