

Outdoor Lighting Concepts Expands Low-Voltage LED Services for Fort Worth Outdoor Lighting Company Clients

October 20, 2026

FORT WORTH, TX - October 20, 2026 -
Outdoor Lighting Concepts is bringing renewed focus to custom low-voltage LED lighting designed to transform backyards and gardens across North Texas. The company is highlighting plants, pathways, and architectural features through energy-efficient systems built to withstand the region's demanding weather conditions.

As a Fort Worth outdoor lighting company, Outdoor Lighting Concepts designs and installs lighting that serves both aesthetic and practical purposes. Low-voltage LED fixtures use less energy than traditional systems while delivering consistent illumination, making them a practical choice for homeowners seeking to enhance curb appeal and improve nighttime safety around their properties.

The approach centers on tailoring each installation to the specific landscape it occupies. Fixtures can be positioned to accent mature trees, line walkways for safer passage, and draw attention to the structural

details of a home. The result is a layered effect that increases visibility after dark while adding to the overall character of an outdoor space.

Ashley Freiman, Design Consultant at Outdoor Lighting Concepts, noted that durability and efficiency guide the company's recommendations. "Texas weather puts real demands on outdoor fixtures, so the systems have to perform through heat, storms, and temperature swings," Freiman said. "Low-voltage LED technology allows homeowners to keep their gardens and pathways lit without a significant increase in energy use, and that combination is what draws many people to consider professional installation."

The Outdoor Lighting Concepts garden LED lighting work extends across a range of residential applications. These include curb appeal lighting at the front of the home, deck and patio illumination for outdoor living areas, pathway lighting that guides visitors safely, and landscape lighting that highlights the features of a garden or yard. The company also offers lighting control automation, allowing homeowners to adjust their systems remotely.

Beyond individual fixtures, Outdoor Lighting Concepts provides color systems that let clients customize the tone of their lighting for a personalized look. The company further offers proactive maintenance to keep systems operating reliably over time, along with a rendering service that helps clients visualize a proposed design before installation begins.

Freiman added that planning plays a central role in the outcome. "Each property is different, so the design starts with understanding how a family uses the space and what they want to feature," Freiman said. "A thoughtful plan ensures the lighting works together rather than as a collection of separate fixtures."

In addition to residential projects, the company designs lighting for commercial properties, helping businesses improve visibility and create welcoming exterior environments. Outdoor audio installation rounds out the service offerings, giving clients the option to pair sound with lighting in their outdoor areas.

Outdoor Lighting Concepts is a landscape lighting design company based in Fort Worth, Texas. The company serves residential and commercial clients with services that include landscape lighting, color systems, and outdoor audio, and it offers a design consultation to help clients plan their projects. Outdoor Lighting Concepts works closely with each client to understand specific needs and develop lighting designs suited to the property.
