

Resveratrol Brand Shares Another Benefit of the Powerful Supplement

June 20, 2016

June 20, 2016 - PRESSADVANTAGE -

Orlando, FL ?June 16, 2016- The liver is one of the most important organs of the body. Unfortunately, it is not immune to a wide variety of conditions. There are ways to take better care of the liver, and one is to follow a healthy diet and use certain natural supplements.

Resveratrol is a supplement polyphenol compound found in particular plants and in red wine. "Many of our customers use Resveratrol for a variety of reasons," Divine Bounty spokesperson Melissa Scott shared. "What many of our consumers will be happy to learn is that recent studies have revealed another potential benefit of this incredible supplement we launched 6 months ago," Scott continues.

The American Liver Foundation supported this topic highlighting the symptoms as well as the benefits of using a natural supplement such as Resveratorl. Resveratrol has the potential to fight nonalcoholic fatty liver disease (NAFLD). This condition is considered to be the most common chronic liver disease worldwide. Individuals who suffer from this condition do not just find themselves need more hospital visits, but also live a reduced quality of life.

Non-alcoholic fatty liver disease, on the other hand, is characterized by a buildup of extra fat in the cells of the liver. This buildup is not due to alcohol consumption. It is not unusual for the liver to have some fat. However, if the fat is over 5 to 10 percent of the liver's weight, it can be called fatty liver.

There are several ways to reduce one's risk of NAFLD, such as eating a healthy diet, maintaining a healthy weight, having regular exercise, and limiting alcohol intake.

A study conducted by World Journal of Hepatology in 2014 investigated potential candidates to help fight NAFLD. One of their main candidates was Resveratrol. "A potential new therapeutic option is the polyphenol resveratrol (RSV). RSV is found in a number of plants, although in low concentrations," the published report shared.

The World Journal of Hepatology (WJH) is a leading academic journal devoted to reporting the latest, cutting-edge research progress and findings of basic research and clinical practice in the field of hepatology.

The study tested the supplement on rats with NAFLD. The findings were very interesting. The results explained that "Resveratrol treatment also improved the inflammatory status of visceral adipose tissue and reduced liver oxidative stress. Here, the effect on lipogenic enzyme activity was equivocal," Karen Louise Thompson, member of the World Journal of Hepatology shared.

The government also conducted several trials. It was found that Resveratrol has significantly helped reduce liver enzyme alanine aminotransferase, nuclear factor kb activity, inflammatory cytokines, hepatic steatosis, and serum cytokeratin. The clinicaltrials.gov registered the trial as NCT02030977.

The Divine Bounty Resveratrol has already seen an increase in interest since these types of studies and additional benefits have become more well known.

Individuals who want to take advantage of the therapeutic effects resveratrol could potentially offer may do so through [supplementation \(amazon.com/Resveratrol-Supplement-Strength-Extract-capsules/dp/B019C0UU5S/\)](https://www.amazon.com/Resveratrol-Supplement-Strength-Extract-capsules/dp/B019C0UU5S/).
