Schwartz?s Greenhouse Announces Updates to Its Hanging Basket Selection

November 02, 2026

ROMULUS, MI - November 02, 2026 -
Schwartz's Greenhouse announces an expanded selection of hanging baskets, providing residential and commercial customers with additional options for decorating outdoor spaces, porches, patios, and other suitable areas. The greenhouse, established in 1937, continues to offer plant products for customers interested in gardening, seasonal displays, and container arrangements. The updated selection reflects the company's ongoing work with plant varieties and growing methods suited to hanging planters.

Hanging baskets offer a practical way to introduce plants into spaces where ground-level planting may be limited. Depending on the plants selected and the available growing conditions, these containers can add color to entrances, balconies, decks, and garden structures. They can also help make use of vertical space in residential landscapes and commercial settings.

The expanded collection includes hanging baskets featuring different plant varieties, colors, and growth habits. Selecting suitable plants depends on factors such as sunlight exposure, temperature, container size, and watering requirements. These considerations can influence how well a basket grows throughout the season and help customers choose arrangements appropriate for their intended locations.

Schwartz's Greenhouse has operated since 1937, serving customers interested in plants and gardening supplies. Its continued focus on growing and selecting plant varieties provides a foundation for maintaining a selection that reflects different gardening needs. The greenhouse's expanded offerings give customers additional choices when planning seasonal displays or adding plants to existing outdoor arrangements.

Proper care remains an important part of maintaining hanging baskets. Containers may dry out more quickly than plants growing in the ground, particularly during warm weather or when exposed to direct sunlight and wind. Regularly checking soil moisture, providing suitable drainage, and following the care requirements of each plant can help support healthy growth. The amount of water needed will vary according to the plant species, container material, weather conditions, and basket placement.

Light exposure is another factor to consider when choosing a hanging arrangement. Some flowering plants grow best in full sun, while others perform better in partial shade or locations with indirect light. Matching plants to their environment can help reduce stress and support flowering throughout the growing season. Customers can use these considerations when deciding where to display their baskets and which varieties may be suitable for their properties.

In addition to expanding its selection, Schwartz's Greenhouse offers information intended to help gardening customers maintain their plants. Educational resources covering placement, watering, and routine care can help gardeners understand the needs of different hanging arrangements. Practical guidance is particularly useful for those new to container gardening, as well as experienced gardeners trying unfamiliar plant varieties.

The availability of hanging baskets also gives property owners options for changing the appearance of outdoor areas without redesigning an entire garden. Seasonal arrangements can be selected to complement existing landscaping, entryways, and patios. Businesses may also use hanging planters to add greenery to customer-facing areas, provided the placement offers appropriate growing conditions and does not obstruct walkways or entrances.

Schwartz's Greenhouse continues to provide plant selections and gardening resources for customers planning residential and commercial projects. The expanded collection offers an opportunity to explore different combinations of plants and identify arrangements that suit individual spaces and care routines. Availability may vary by plant variety and season.

For further information about the current hanging basket selection and available gardening resources, interested customers can contact Schwartz's Greenhouse or visit the company's website.
