

Go Industries Expands Winch Grille Guards Lineup for Medium Duty Trucks

November 17, 2026

Richardson, TX - November 17, 2026 -
Go Industries Inc has expanded its line of front-end protection products with the introduction of a commercial grade integrated winch system, broadening the options available for operators of medium and heavy duty work vehicles.

The new Commercial Grade Winch System is a modular style grille guard that serves as a base for adding a winch carrier and optional brush guards. The unit is constructed from 5/16 laser cut steel uprights paired with 2.5 inch, 16 gauge steel cross tubes. The design incorporates custom, heavy-duty mounting brackets intended to simplify installation and increase structural strength. An optional 9.5 or 16.5 winch carrier is available, allowing fleet managers to configure the system according to their recovery needs.

Optional brush guards can be added to follow the lines of the vehicle and provide additional coverage for the headlight area, protecting it from road debris and off-road brush. Each system is backed by a three year warranty covering materials, workmanship, and finish. The components are manufactured in the United

States.

The expansion adds to a catalog that already includes medium duty grille guards for models such as the Chevrolet C4500 through C6500, International CV515, Ford F650, and Ford F750. Those guards are engineered for vehicles with a tilt body, allowing the guard to articulate forward for hood access, and feature a winch tray rated to accommodate winches up to 16,500 pounds.

"The addition of the Commercial Grade Winch System reflects the direction the market has taken, with more fleet operators requesting integrated recovery capability on their vehicles," said a spokesperson for Go Industries. "A worktruck grille guard has to do more than look right. It has to hold up under daily commercial use, and that priority guided the engineering of this system."

The company noted that demand for grille guards for medium duty trucks has grown alongside the use of larger chassis in commercial and municipal fleets. The modular approach is designed to let buyers start with the base guard and add components over time rather than replacing the entire assembly.

"Operators tell us they want durable protection that can be serviced and upgraded," the spokesperson added. "Go Industries set out to build what it considers among the best grill guards for trucks in this weight class, and the modular design is central to that goal."

In addition to grille guards, Go Industries manufactures heavy duty headache racks, bumper replacements, and a range of other truck accessories. Grille guards, bumper replacements, and headache racks produced by the company are made in the USA.

Go Industries Inc has specialized in fleet, truck, and law enforcement accessories since 1978. Based in Richardson, Texas, the company produces truck accessories including grille guards, winch application systems, bumper replacements, airflow tailgates, headache racks, mud flaps, and steps, along with specialized equipment for law enforcement vehicles and custom manufacturing services. Go Industries holds Platinum Status with SEMA and operates a subsidiary, Longhorn Reels, which provides wire and cable handling solutions.
