

Utah Trenchless Expands Trenchless Sewer and Drain Services for Provo Property Owners

October 29, 2026

PROVO, UT - October 29, 2026 -
Utah Trenchless, a locally owned provider of underground pipe solutions, has established a dedicated presence in Provo to serve area property owners facing sewer and drain concerns. Operated by Spencer and Kourtney Ruff, the company focuses on trenchless methods that address damaged or failing lines with less surface disruption than traditional excavation when conditions allow.

Sewer and drain problems often develop gradually and out of sight. Tree root intrusion, aging clay and cast iron pipes, ground shifting, grease buildup, and recurring blockages are among the common issues that lead homeowners to seek a professional evaluation. Left undiagnosed, these conditions can progress to slow drains, backups, and line failures that affect daily use of a property.

Utah Trenchless follows an inspection-first approach, using high-definition cameras to locate the source of a problem before any work begins. This method allows the company to identify whether an issue stems from roots, cracks, offsets, or blockages, and to recommend an appropriate course of action rather than relying on

guesswork.

For qualifying repairs, trenchless technology offers an alternative to digging long open trenches across a yard. Techniques such as pipe bursting and pipe lining allow crews to replace or restore a line through small access points, helping preserve landscaping, driveways, and patios. In cases involving collapsed lines or the need for slope correction, traditional excavation may still be the suitable solution, and the company evaluates each situation on its own circumstances.

"Many property owners do not realize they have options beyond tearing up the entire yard," said Spencer Ruff, President of Utah Trenchless. "The goal is to diagnose the actual problem first, then explain the methods that fit the situation. Trenchless repair is not right for every case, but when it is, it can resolve the issue with far less disturbance to the property."

The range of sewer and drain services by Utah Trenchless includes sewer line inspection, trenchless sewer repair, sewer line replacement, drain cleaning, hydro jetting, septic service, water main and water line work, and utility locating using air and hydro excavation. This breadth allows the company to address both routine maintenance needs and more complex underground projects.

Ruff noted that technicians are salaried rather than paid on commission, a structure intended to remove any incentive to recommend unnecessary work. "Honest diagnostics matter to the people trusting us with their homes," he said. "When the technician has no reason to upsell, the recommendation reflects what the pipe actually needs."

Utah Trenchless in Provo serves the surrounding region of Northern Utah, including communities throughout Utah County and neighboring areas. The company also works with real estate professionals who need prompt video inspections and clear estimates during property transactions.

Utah Trenchless is a locally owned plumbing company specializing in trenchless sewer repair, drain cleaning, and underground pipe solutions across Northern Utah. Founded by Spencer and Kourtney Ruff, the company emphasizes transparent diagnostics, advanced trenchless technology, and minimal property disruption. Utah Trenchless provides services to Provo and nearby communities, with a focus on honest evaluation and durable repairs.
