OneTapTee Expands Custom Apparel Line for Single-Item Orders Featuring AI-Generated Designs, Photos and Logos

October 28, 2026

SCOTTSDALE, AZ - October 28, 2026 -
OneTapTee has expanded its custom apparel selection, giving customers more ways to turn personal artwork, AI-generated designs, photographs and business logos into clothing without placing a bulk order. The expanded range includes T-shirts, pullover and zip-up hoodies, crewneck sweatshirts, youth apparel and polo shirts, with orders starting at a single item.

The expansion serves customers who want to purchase finished apparel for themselves, create a personalized gift or order clothing for a small business. Customers can upload their artwork, preview it on a selected garment and place an order directly through OneTapTee.

Customers who create an image using ChatGPT or another AI image tool can upload the finished design as a PNG or JPG and have it printed on apparel. They do not need to open an online store, create a product listing or set up a print-on-demand business. The process allows someone with a finished digital image to order a physical product for personal use or as a gift.

The same ordering process supports original illustrations, photographs and company logos. OneTapTee?s online editor lets shoppers move and resize their uploaded artwork and preview its placement before checkout. Customers should use images they have the rights to reproduce and review image quality before ordering.

The expanded apparel selection includes everyday cotton, soft-style, premium and heavyweight custom T-shirts, along with women?s and youth styles. Pullover and zip-up hoodies provide additional options for personal designs and photo gifts, while crewneck sweatshirts offer another way to print artwork on a single garment. The polo shirt collection includes printed and embroidered logo options for individual business owners and small teams.

Customers can order one custom T-shirt, hoodie, sweatshirt or polo without purchasing additional pieces. Available decoration methods and print areas depend on the garment selected.

The broader product range supports projects such as printing a dog?s photograph on a hoodie, putting a child?s drawing on a youth shirt, turning an AI-generated illustration into a graphic tee or ordering a polo with a small-business logo. It also accommodates customers who need a few personalized garments rather than a large production run.

Shoppers select a product, upload their image and review the design before paying. Apparel is made to order in the United States, with estimated arrival information provided on product pages and shipping charges displayed at checkout.

OneTapTee is an online custom apparel and personalized gift store that helps customers turn their photos, artwork and logos into finished products. The expanded collections are available now through the OneTapTee website.
