

822 Heat and Air Expands HVAC Duct Installation and Replacement Services Across DFW Metroplex

November 16, 2026

Benbrook, TX - November 16, 2026 -
822 Heat and Air has expanded its residential and commercial HVAC duct services throughout the Greater Dallas-Fort Worth Metroplex, giving homeowners and business owners across the region access to comprehensive ductwork assessment, repair, and installation performed by licensed and insured technicians.

The expanded service focus addresses a common but frequently overlooked contributor to high energy costs and inconsistent indoor comfort: aging, leaking, or improperly designed ductwork. According to the company, many heating and cooling complaints stem not from the central system itself but from the ducts responsible for distributing conditioned air throughout a building.

822 Heat and Air provides a full range of ductwork solutions, beginning with specialized diagnostics that inspect for leaks, disconnections, damage, and design flaws. When problems are limited to minor leaks or loose connections, the company performs HVAC duct repair and sealing using professional-grade materials rather than recommending a full replacement. For older or severely damaged systems, the company offers

properly sized and well-sealed replacement options.

Homeowners in Tarrant County can now schedule flex duct replacement Bedford services, which address flexible ductwork that has become crushed, kinked, or deteriorated over time. The company notes that flexible ducting is widely used in residential construction and can lose efficiency when it sags, disconnects, or develops gaps at its connection points.

In communities to the south of Dallas, the expanded offerings include Cedar Hill duct installation for new construction, home additions, and renovation projects. For these installations, technicians design complete duct systems tailored to the specific heating and cooling requirements and airflow needs of each space.

"Ductwork is the part of an HVAC system that most people never see, and that is exactly why it tends to be ignored until energy bills climb or certain rooms never reach a comfortable temperature," said a representative of 822 Heat and Air. "The goal with this expansion is to make thorough duct evaluation and honest recommendations available to more families and businesses across the region."

The company emphasizes transparency in its process. Customers receive clear explanations of diagnostic findings and upfront pricing before any work begins. According to the company, technicians do not pressure customers to replace ductwork that can be effectively repaired.

"Not every duct problem requires a complete replacement," the representative added. "In many cases, a targeted repair or proper sealing restores airflow and efficiency at a fraction of the cost. Each home is evaluated on its own conditions rather than a one-size-fits-all approach."

Common issues the company addresses include uneven heating or cooling between rooms, elevated energy bills despite a well-maintained system, excess dust, poor indoor air quality, noisy ductwork, and pest activity within ducts.

822 Heat and Air is a commercial and residential heating, ventilation, and air conditioning contractor serving Crowley, Burleson, Benbrook, Granbury, Joshua, Godley, Cleburne, Alvarado, Fort Worth, Arlington, Dallas, and the surrounding Greater DFW Metroplex and suburbs. The company offers commercial HVAC, residential HVAC, ductwork, and AC tune-up services, with financing available subject to credit approval. Its technicians are licensed and insured and use current tools and techniques to support year-round comfort and energy efficiency.
