

822 Heat and Air Expands Furnace Repair and Installation Services Ahead of Winter

November 18, 2026

Benbrook, TX - November 18, 2026 -
822 Heat and Air, a commercial and residential HVAC contractor serving the Greater DFW Metroplex, is directing attention to its furnace repair and installation services as cooler temperatures approach and homeowners prepare their heating systems for the winter season.

The company reports that demand for heating service typically rises sharply with the first cold snap, when dormant furnaces are switched on after months of inactivity. Common seasonal complaints include a furnace not tunring on, cold air blowing from vents, short cycling, uneven heating, and unusual noises. Addressing these concerns before winter sets in helps households avoid emergency breakdowns during the coldest stretches of the year.

822 Heat and Air provides furnace repair for gas and electric furnaces, heat pumps, and ductless mini-split systems. Technicians diagnose issues such as failed igniters, blower motor failures, thermostat malfunctions, control panel problems, gas valve faults, and venting concerns. Each visit includes safety-first evaluations,

with carbon monoxide and combustion checks performed to confirm that systems operate safely.

In cases where repairs are no longer cost-effective, the company offers furnace installation and complete system replacement. Load calculations are performed to determine appropriate system sizing, and clients are presented with both standard and high-efficiency options. The installation process covers gas line connections, venting, ductwork modifications, and thermostat setup.

David, a representative of 822 Heat and Air, noted that early preparation benefits homeowners throughout the region. "The weeks before the first hard freeze are when heating systems should be inspected," David said. "Many of the service calls received each winter trace back to problems that could have been identified during a routine seasonal checkup. Catching a worn igniter or a failing blower motor in advance prevents a household from losing heat on the coldest night of the year."

David added that the company approaches each situation with an emphasis on clear communication. "Every recommendation is based on an honest assessment of the equipment," he said. "When a repair is the sensible choice, that is what gets recommended. When a system has reached the end of its service life and replacement makes more financial sense, that is explained with upfront pricing so the homeowner can make an informed decision."

The company also offers seasonal maintenance plans that include scheduled tune-ups and priority service, along with emergency repair for urgent heating failures. Financing options are available for replacements and new installations, subject to credit approval and offer eligibility.

822 Heat and Air is a licensed and insured HVAC contractor providing commercial and residential heating, ventilation, and air conditioning services. In addition to furnace work, the company offers commercial HVAC, residential HVAC, ductwork installation and repair, and AC tune-up service. Technicians are EPA-certified, and the company operates under license number TACLA65080C. Service areas include Crowley, Burleson, Benbrook, Granbury, Joshua, Godley, Cleburne, Alvarado, Fort Worth, Arlington, Dallas, and communities throughout the Greater DFW Metroplex and its suburbs. The company focuses on keeping homes and businesses comfortable and energy-efficient throughout the year, backing its heating services with safety inspections and a warranty on workmanship.
